¹Committee on Payments and Market Infrastructures Technical Committee of the International Organization of Securities Commissions Principles for financial market infrastructures

Key abbreviations and terms

Abbreviation	Full name
NCC	Bank National Clearing Centre (joint-stock company)
CCP	Central counterparty
EMIR	European Markets Infrastructure Regulation
OTC	Over-the-counter
PFMI	Principles for Financial Market Infrastructures
Clearing Rules	Clearing Rules of the Bank National Clearing Centre (Joint-stock company) Part I. General part, Part II. Tariffs, Part III. Part III. Clearing Rules for Securities Market, Part IV. Clearing Rules for FX and Precious Market, Part V. Clearing Rules for Derivatives Market, Part VI. Clearing Rules for Commodities Market, Clearing Rules for Standardised OTC Derivatives Market.
CBR	The Central bank of the Russian Federation
NSD	Non-banking credit organization CJSC National Settlement Depository, Central Securities Depository of the Russian Federation, a part of Moscow Exchange
CM	Clearing member/Clearing participant
Risk Department	Risk analysis and control department
Moscow Exchange (exchange)	Public Joint-Stock Company «Moscow Exchange MICEX-RTS»
Guarantee fund	A default fund aimed at cushioning a monetary impact caused by a CM's default if both ,the defaulted CM's collateral and NCC's dedicated capital (Skin-in-the-game), deemed underprovided. There are 4 separate default funds in Moscow Exchange's markets. Each allocated to the distinct business line: FX and Precious Metals, Securities, Derivatives, Standardised OTC Derivatives.

I. Executive summary

NCC has conducted the CPMI-IOSCO self-assessment and presents the results in this disclosure aimed to a wide range of stakeholders.

The self-assessment has revealed that the majority of international regulatory principles are complied with as well as the clearing house is up to date with regards to its management practices, procedures and governance.

The following principles are in particular focus:

Principle 2 (Governance) due to the lack of independent directors at the Supervisory Board and the fact that the composition of the Risk Committee is not disclosed.

Principle 13 (Participant-default rules and procedures) as the frequency of default-management procedures' testing is not formalized.

II. Summary of major changes since the last update of the disclosure.

The following changes took place over November 2015 to June 2016 period:

- 1) "REPO with GCC" (General Collateral Certificate) project was implemented.
- 2) The status of the commodity delivery operator was granted by the CBR to NCC which enabled to launch "Grain Market" project.

NCC performed the first self-assessment of its rules, principles and procedures in March 2015. In November 2015 the second self-assessment was carried out in view of the following safeguard structure augmentations, introduced over March-November 2015 period:

- 1) The safeguard structure was modernized in line with the CPMI-IOSCO recommendations² and on the back of CBR's new regulation by the following:
 - a) Introduction of the minimum CCP dedicated capital requirement (Skin-in-the-game);
 - b) Introduction of loss capping and loss spreading procedures in view of bolstering CCP's stability and resiliency (the amendments are described in Principle 4);
 - c) Introduction of a variable contribution to the initial margin (aka Stress Collateral) designed to cover contributor's own losses in case of market event and its subsequent default. The Stress Collateral is utilized prior to exhausting any fixed contribution to Guarantee fund by a non-defaulting clearing member.
- 2) The business risk event reserves was introduced (the amendments are described in Principle 15. General business risk).
- 3) The conflict of interest mitigating procedure is implemented (the amendments are described in Principle 2).

² «Recovery of financial markets infrastructures», CPMI-IOSCO, October 2014.

III. General background on the FMI

NCC is a fully owned subsidiary of MOEX Group – a leading provider of trading, clearing and depository services in Russia and CIS countries. NCC is authorized and supervised as a multi-class clearing house and the commodity delivery operator by the Central Bank of Russia, and is also licensed to undertake banking activities in order to support its central counterparty clearing functions.

As the Central Counterparty, NCC mutualizes risk arising from clearing members’ trading activities on the exchange. In other words, NCC acts as a singular counterparty for the trading parties: it becomes the seller for every buyer and the buyer for every seller, that substitutes the contractual obligation between the seller and the buyer of a contract with two equivalent contractual obligations but now aligned with the CCP.

The principal objective for NCC is to assure financial stability on all its business segments for the trading participants. To achieve this NCC employs up-to-date risk-management practices that meets the international standards.

Being a Clearing House and the CCP at the same time creates the following advantages for its clearing members:

- To any non-defaulting clearing member NCC guarantees flawless execution, even when the opposite side of the trade fails to deliver on its obligations;
- For any clearing member it suffices setting only one counterparty limit, to the CCP, instead of operating and monitoring multiple counterparty lines for each its counterparty;
- NCC provides efficiency to its clearing members by netting out the outstanding claims and liabilities on a regular basis. This alleviates effectiveness in usage of financial assets and decreases transactional costs.

The strategic goal of NCC is to provide its clearing members with the integrated clearing service across its all business segments. This implies maintenance of the unified collateral and positions (limits) across all markets served by NCC.

Key quantitative figures:

- NCC provides services to 674 clearing members. The average volume of cleared transaction is RUR 3-4 trln.
- NCC holds a substantial amount of capital (RUR 52.6 bn as of June 1st, 2016).
- In 2015 NCC earned RUR 22.6 bn of net income in 2015.

IV. Principle-by-principle narrative disclosure

Final score of the self-assessment of Bank National Clearing Centre (Joint-stock company), June 2016	
Assessment category	Principles
Observed	1,3,4,5,6,7,8,9,10,12,14,15,16,17,18,20,21,22,23
Broadly observed	2,13
Not applicable	11,19,24

PRINCIPLE 1: LEGAL BASIS

An FMI should have a well-founded, clear, transparent, and enforceable legal basis for each material aspect of its activities in all relevant jurisdictions.

Key consideration 1:

The legal basis should inspire a high degree of certainty for each material aspect of FMI's activities in all relevant jurisdictions.

The material aspects of NCC's activities that require a high degree of legal certainty are as follows:

- a procedure for performance (termination) of obligations admitted to clearing;
- a procedure for posting, maintaining and refunding the clearing collateral;
- default management procedures;
- collateral collection procedures;
- close-out netting;
- a procedure for interaction with the stock exchange, settlement institution and settlement depository;
- requirements for clearing members, and the procedure for granting, suspension and termination of admission.

The relevant jurisdiction within NCC's activities is the Law of the Russian Federation. All NCC's actions and procedures shall comply with the requirements of the Russian legislation. If NCC opens an account at foreign banking institution (settlement organizations) beyond Russian jurisdiction, the laws of the relevant foreign jurisdiction apply to the contractual relations with these organizations if the agreement between NCC and the foreign bank does not explicitly refer to the otherwise (US, EU and other relevant jurisdictions).

The major legislative edifice that guarantees a high degree of legal certainty is the Federal Law dated February 7th, 2011 No. 7-FZ "On Clearing, Clearing Activities and Central Counterparty". Internal documents and procedures of NCC have been developed in accordance with the legislation of the Russian Federation and CBR's regulations and have been approved by the management of NCC and registered with the regulator (Central Bank of Russia - CBR).

NCC actively interacts with CBR and other regulatory authorities to ensure a high degree of legal certainty in the regulations regarding every material aspect of NCC's activities.

Clearing rules indicate the terms of NCC's clearing and CCP activities based on the legislation. If NCC performs CCP functions at the exchange markets, it checks the validity of filing CMs orders and sends the reports to the Exchange. If the check is carried out successfully, two trades are executed (CM-CCP-CM). The legal model is similar to an open offer; novation is not applied.

The terms and conditions of the netting facility are stipulated in Clearing Rules, whereto by signing the relevant agreements during the admission process CMs automatically becomes acceded to. The legal basis for netting is the Clearing Law 7-FZ.

The settlement finality is facilitated by settlement organizations and the settlement depository (NSD). Trading and clearing accounts opened at NSD are used for settlements after the clearing procedure takes place. The settlement of a payment, transfer order or other obligation is considered to be executed as soon the funds arise at corresponding account at the settlement organization.

Key consideration 2:

An FMI should have rules, procedures, and contracts that are clear, understandable, and consistent with relevant laws and regulations.

The Clearing Rules are subject to a sign off by all relevant units at NCC, including the Clearing, Risk, and Legal Departments. The practice warrants adherence to a high level of transparency and certainty of the procedures described in the Clearing Rules. Furthermore, the Clearing Rules are subject to registration with CBR. CBR performs overall control and supervision in the financial markets, analyzes financial markets major trends, and CMs' requirements.

Any minor amendment of the Clearing Rules requires a mandatory sign off procedure by NCC's units including Legal Department which carries out legal checks in order to ensure compliance with the legislation and NCC's internal documents. Furthermore, the Clearing Rules are subject to rigorous check by Internal Control, Risk Management, users' committees, Supervisory Board.

The Clearing Rules come into force only upon CBR's registration and on the date determined by the Supervisory Board. NCC discloses The Clearing Rules by the means of a website at least 5 days prior to the due date. There are cases described by the law indicate when the Clearing Rules' provisions may come into force on a later date (e.g. clauses of CCP's responsibility amount).

Key consideration 3:

An FMI should be able to articulate the legal basis for its activities to relevant authorities, participants, and, where relevant, participants' customers, in a clear and understandable way.

NCC operates in accordance with the law of the Russian Federation, NCC's Articles of Association (<http://nkcbank.ru/viewCatalog.do?menuKey=91> available in Russian only), and other internal documents, that indicate the legal basis for NCC's authorized bodies' activities (e.g. Supervisory Board regulation and Management Board regulation). Terms and conditions of the clearing agreements with CMs are declared in the Clearing Rules.

Key consideration 4:

An FMI should have rules, procedures, and contracts that are enforceable in all relevant jurisdictions. There should be a high degree of certainty that actions taken by the FMI under such rules and procedures will not be voided, reversed, or subject to stays.

The Clearing Rules and other NCC's internal documents are subject of an approval by NCC's Legal Department, that ensures compliance with Russian legislation and NCC's internal documents. Moreover, the Clearing Rules subject to mandatory CBR registration.

A high degree of certainty that NCC's internal documents, including the Clearing Rules, will not be voided, reversed or subject to stays is ensured by legal scrutiny of internal documents and by confirming compliance with the legal clauses and NCC's internal documents.

A high degree of certainty that the contracts concluded by NCC operating as a CCP will not be voided is ensured by legal examination of the documents setting forth the terms and conditions of clearing services, by checking CMs as regards their legal capacity to enter transactions on the basis of Clearing Rules.

Legal expertise (by means of both internal and external legal experts) of documents mitigates the risk of NCC's actions and contracts to be considered invalid or voided due to rules and procedures indicated in the Clearing rules that do not meet Russian legislation and CBR regulatory acts requirements.

Currently, there are no court decisions holding any of NCC's activities or arrangements under its rules and procedures to be unenforceable.

Key consideration 5:

An FMI conducting business in multiple jurisdictions should identify and mitigate the risks arising from any potential conflict of laws across jurisdictions.

Currently NCC operates within the jurisdiction of the Russian Federation only. Every NCC's action and procedure shall comply with imperative requirements of the Russian legislation. If NCC opens accounts at foreign banks (settlement organizations) beyond Russian jurisdiction, laws of the foreign state apply to the contractual relations with these organizations if the agreement between NCC and the foreign bank does not indicate otherwise (US, EU and other relevant jurisdictions).

Final conclusion on the Principle 1

NCC performs its activities in accordance with its legal basis, which provides a high degree of certainty for all material aspects of NCC's activities.

NCC has rules and procedures that are clearly formulated, easy to understand and conform to the effective laws and regulations.

NCC clearly and understandably determines the legal basis of its activities for the competent authorities and CMs.

NCC uses the rules and procedures valid

and effective in the jurisdiction where NCC conducts its activities. NCC ensures a high degree of certainty that the actions performed by NCC in accordance with such rules and procedures will not be voided, reversed or stayed.

PRINCIPLE 2: GOVERNANCE

An FMI should have governance arrangements that are clear and transparent, promote the safety and efficiency of the FMI, and support the stability of the broader financial system, other relevant public interest considerations, and the objectives of relevant stakeholders.

Key consideration 1:

An FMI should have objectives that place a high priority on the safety and efficiency of the FMI and explicitly support financial stability and other relevant public interest considerations.

NCC is a 100% subsidiary of Public Joint-Stock Company Moscow Exchange MICEX-RTS and its strategy is an integral part of the Strategy of Moscow Exchange.

The Strategy identifies 3 major objectives for NCC:

- 1) Ensuring financial stability of the markets;
- 2) Offering efficient clearing and collateral management services to CMs;
- 3) Resilience and business continuity.

The assessment is carried out on the level of MOEX Group and Supervisory Board of NCC on a regular basis.

Main statements of the Strategy are associated with improving efficiency and safety, supporting financial stability and focus on convenience for CMs, including improvement and integration of the risk

management system across all markets, creating single clearing and settlement pool for all markets, simplifying access to clearing for foreign investors, optimization/harmonization of the business processes based on the IT platform improvements.

Key consideration 2:

An FMI should have documented governance arrangements that provide clear and direct lines of responsibility and accountability. These arrangements should be disclosed to owners, relevant authorities, participants, and, at a more general level, the public.

NCC's Supervisory Board, Management Board and CEO operate by virtue of the Articles of Association of NCC. NCC Supervisory Board's, Management Board's and CEO's roles, functions and responsibilities are separated in accordance with the Russian legislation on JSC and are indicated in NCC's Articles of Association.

Furthermore, the Supervisory Board functions are based on the Regulation on the Supervisory Board of NCC which stipulates the rights, obligations and responsibility of the members of the Supervisory Board in course of performing their functions.

Furthermore, the Management Board of NCC acts by virtue of the Regulation on the Management Board of NCC. The regulation includes the procedure for Management Board's decision-making and states the rights and responsibilities of CEO and Management Board's members. The terms of reference the Supervisory Board and the Management Board are separated in accordance with Russian legislation on joint stock companies as reflected in NCC Articles of Association.

NCC's shareholders are guaranteed to have access to information in accordance with the effective legislation of the Russian Federation.

Furthermore, pursuant to the effective legislation, NCC discloses its financial statements and other information about its activities crucial for CMs and other stakeholders at its official website <http://nkcbank.ru>. Moreover, NCC sends CMs clearing results' reports, holds meetings with CMs and communicates via user committees.

NCC's Articles of Association, which stipulate the separation of terms of reference of the management bodies have been uploaded onto the official NCC's website for public use.

NCC discloses its financial statements in accordance with the Russian and international standards. NCC also discloses additional information about the operations material for the shareholder, investors and other stakeholders, while maintaining a reasonable balance between NCC transparency and commercial interests' protection.

NCC discloses information using most convenient instruments and methods for the recipients. Comprehensive information is published at the corporate website www.nkcbank.ru MOEX's website www.moex.com . NCC also discloses information via mass media. Every significant event or action of NCC is accompanied by press release in the mass media.

Key consideration 3:

The roles and responsibilities of an FMI's board of directors (or equivalent) should be clearly specified, and there should be documented procedures for its functioning, including procedures to

identify, address, and manage member conflicts of interest. The board should review both its overall performance and the performance of its individual board members regularly.

The rights and obligations of the Supervisory Board are clearly defined in the Regulation on the Supervisory Board of NCC and the Articles of Association of NCC. The Articles of Association of NCC stipulates that the terms of reference of the Supervisory Board include the issues of general management of NCC's operation, except the issues which the Federal Law "On Joint Stock Companies" includes in the terms of reference of the General Meeting of Shareholders.

The terms of reference of the Supervisory Board are clearly defined in the Articles of Association of NCC. In particular, the terms of reference of the Supervisory Board include:

- determination of the Bank's priorities, approval of NCC's development strategy;
- placement of bonds and other issue-grade securities by NCC;
- approval of the resolution on issuance (additional issuance) of securities;
- formation of the Management Board of NCC, determination of the quantity of its members, election of members of the Management Board, setting the duration of powers for each member of the Management Board;
- approval of NCC budget;
- recommendations as to the size of share dividends and procedure for payment thereof;
- approval of NCC's internal documents determining basic principles of its activities, including asset and liability management principles, risk management principles and measures aimed at

decreasing risks in clearing operations;

- documents on the organization of the internal control framework of NCC.

According to the Articles of Association of NCC, any issues included in the terms of reference of the Supervisory Board cannot be referred for resolution to the Management Board or Chairman of the Management Board.

In order to prevent conflicts of interest, the Supervisory Board includes independent director who has sufficient autonomy to form his own position and who is able to make objective judgments independently from any influence of NCC's executive bodies, its shareholder, or other stakeholders. NCC aims to increase the share of such members in the Supervisory Board, and to this end, the Regulation on the Supervisory Board of NCC recommends that independent directors shall account for at least one-third of all elected members of the Supervisory Board.

In addition, in order to prevent conflicts of interest, the Supervisory Board presently includes only one representative of the executive bodies of NCC, i.e. the Management Board – NCC's CEO.

The procedures are internal documents, however they are sent to participants and regulator as they ask NCC to do so.

The measures taken by NCC to identify, examine and resolve any conflicts of interest between the members of the Supervisory Board are revised as often as necessary, at least – once a year.

There are 2 committees of the Supervisory Board of NCC: the Nominations and Remunerations Committee and the Risks Committee.

The Nominations and Remunerations Committee was established to ensure

sound and timely decision-making in the field of personnel management and remuneration. In particular, it develops and submits to the Supervisory Board the recommendations on the priorities of NCC's activities in the field of personnel management and remuneration of the management bodies and the Audit Commission, on the issues of NCC's policy and standards in selection of candidates for membership in the management bodies of NCC.

The Committee is elected by the Supervisory Board from the members of the Supervisory Board and shall consist of at least 3 persons.

The Risks Committee was set up in order to meet the requirements of the Federal Law "On Clearing and Clearing Activities" as regards tightening control over the risk management framework. The main objective of the Committee is participation in improving the risk management framework of NCC as a clearing institution and CCP in order to increase its financial stability and ensure continuity of its clearing activities.

Members of the Committee are elected from among the members of the Supervisory Board of NCC in the quantity determined by the Supervisory Board of NCC, but in any case it shall range from 5 to 15 members.

The Committee may include: representatives of CMs (not more than one member from one CM); members of the Supervisory Board of NCC; representatives of CBR, representatives of self-regulatory organizations. Representatives of CMs shall account for at least half of the Committee's members.

Risks Committee consists of 6 members as of June 1st, 2016.

NCC's Supervisory board does not have its own audit committee, however Moscow Exchange's Supervisory Board

does have audit commission (<http://moex.com/a2356>). Such corporate structure is designed due to high level of NCC's integration in Moscow Exchange.

The quality check of corporate governance of NCC, also touching upon the procedure of activities of the Supervisory Board of NCC, is performed as follows:

- as part of CBR assessment of the management quality of the credit institution operating as a CCP, in accordance with the Directive No. 2919-U "On Assessment of the Management Quality of a Credit Organization Performing the CCP Functions";
- as part of NCC self-assessment of the state of its corporate governance. The Supervisory Board and the Nominations and Remunerations Committee review the performance of every member of the Supervisory Board and the Supervisory Board itself on a regular basis.

Key consideration 4:

The board should contain suitable members with the appropriate skills and incentives to fulfil its multiple roles. This typically requires the inclusion of non-executive board member(s).

The sole shareholder ensures the appropriate skills and incentives of the Supervisory Board by electing members with significant expertise in banking, financial and research fields, high level of personal competence, professional and personal reputation.

Supervisory board members' motivation framework ensures the compensation commensurate to the market level (finance and banking fields). Furthermore, the motivation system encourages Supervisory Board members

to take part in Supervisory Board's meetings and committees. The size of annual remuneration for the members of the Supervisory Board of NCC is determined depending on their roles and degree of participation in the meetings of the Supervisory Board of NCC, its committees. A thorough remuneration policy motivates Supervisory Board members and ensures accomplishment of long-term goals indicated at the beginning of Principle 2.

The procedure for the election and determination of independence of NCC Supervisory Board members is stipulated in the Regulation on the Supervisory Board of NCC, based on the provisions of the Code of Corporate Governance recommended for use by CBR:

The assessment of independence is carried out by the Corporate Governance Department after the analysis of the members of the Supervisory Board conformity with the independence criteria stipulated in the abovementioned Regulation on the basis of the directors' personal questionnaire data, regular surveys among them, and collection of additional information on legal entities, whose management bodies include the members of the Supervisory Board of NCC. For the corporate years 2015-2016, 9 members were elected to the Supervisory Board of NCC, 1 of them is recognized as independent, and 8 (except NCC's CEO) as non-executive members.

Key consideration 5:

The roles and responsibilities of management should be clearly specified. An FMI's management should have the appropriate experience, a mix of skills, and the integrity necessary to discharge their responsibilities for the operation and risk management of the FMI.

The Management Board is a collegial executive body, which conducts daily management of NCC's operations. The terms of reference of the executive bodies include all issues of NCC's current activities, except the issues included in the terms of reference of the General Meeting of Shareholders or the Supervisory Board. The executive bodies of NCC arrange implementation of resolutions of the General Meeting of Shareholders and the Supervisory Board. The terms of reference of the Management Board are clearly defined in the Articles of Association of NCC. The rights and obligations of the members of the Management Board are determined by the Russian legislation, the Articles of Association of NCC, and the contract concluded between each member of the Management Board and NCC.

There is Asset management committee of the Management Board. The Committee is engaged in determining the list of eligible assets and their quantitative and qualitative features, setting limits for operations with banks and determining interest rates for raising and placement liquidity. The procedures of the Committee is defined by the Regulation on the Committee.

The Management Board of NCC is an executive body reporting to the General Meeting of Shareholders and the Supervisory Board of NCC. The main objective of the Management Board is to implement the strategy and the main priorities of NCC set by the General Meeting of Shareholders and the Supervisory Board, as well as implementation of other resolutions of the General Meeting of Shareholders and the Supervisory Board. Supervisory Board sets, reviews and monitors Management Board's KPIs.

The present members of the Management Board of NCC possess sufficient expertise and skills (biographies are disclosed at NCC's website

<http://www.nkcbank.com/viewCatalog.do?menuKey=39>) required to govern NCC and manage its risks, and meet the qualification and business reputation requirements stipulated by the effective banking legislation.

Fulfillment of these requirements is ensured in the course of formation of NCC Management Board.

All members of the Supervisory Board of NCC possess sufficient experience and professional integrity to manage NCC's operations and risk management.

The fulfillment of these requirements is ensured through the provisions of NCC Articles of Association stipulating that all members of the Supervisory Board must meet the qualification and business reputation requirements set by the federal laws and regulations of CBR.

Information concerning the experience (biography) of each member of the Supervisory Board is publicly available at NCC's website.

Early termination of NCC's CEO and members of the Management Board is considered by the Supervisory Board.

Key consideration 6:

The board should establish a clear, documented risk-management framework that includes the FMI's risk-tolerance policy, assigns responsibilities and accountability for risk decisions, and addresses decision making in crises and emergencies. Governance arrangements should ensure that the risk-management and internal control functions have sufficient authority, independence, resources, and access to the board.

The risk management framework of NCC comprises:

- Internal documents approved by the relevant management bodies of NCC;
- System of risk management functions distribution between the management bodies and officers;
- Internal procedures and IT systems ensuring a continuous identification, assessment and control of risks taken, as well as provision of information to stakeholders about NCC risks.

The Supervisory Board of NCC has approved the Risk Management Policy of NCC. The main body in charge of risk management is Risk Department, which is responsible for the following:

- the development of the risk management policy and strategy of NCC;
- the development or participation in the development of strategic, methodological and organizational documents associated with risk management in NCC and Moscow Exchange;
- the identification, evaluation and monitoring of economic risks;
- the organization or participation in organization of the process of identification, evaluation and monitoring of other risks;
- the formulation of proposals and recommendations on risk mitigation.

Risk Department reports to the Chairman of the Management Board of NCC and Supervisory Board oversees Risk Department's activities. Besides, NCC has specifically appointed officers responsible for managing individual risks: namely legal risk, operational risk, and reputation risk (on the basis of Regulations on legal, operational and reputational risks). These persons also report to the Chairman of the Management Board.

The authorities of management bodies in making risk management decisions are set forth in the Articles of Association of NCC:

- The Supervisory Board is in charge for setting general risk management principles, and it controls their implementation, it also approves Clearing Rules and the criteria for temporarily excess cash allocation.
- The Management Board is in charge for approving the internal documents created to further promotion of the general risk management principles, it approves static risk parameters and limits for the allocation of temporarily excess cash;
- The Chairman of the Management Board makes operational risk management decisions.

In the internal documents, risk tolerance is examined when determining the principles for investment portfolio formation, including the selection of counterparties and instruments in course of allocation of temporarily excess cash of NCC, and when formulating approaches to evaluation of reliability of the counterparties and CMs (for example, by means of the internal rating system). In addition, NCC as a qualified CCP strictly complies with CBR's requirements on credit institutions-CCPs' operations as regards limiting the risks assumed in course of clearing activities and banking operations.

The Supervisory Board not only approves the documents determining the major risk management principles, but also oversees the arrangement of the risk management framework of NCC, including evaluation of efficiency of the risk management framework. To this end, the Supervisory Board, and, with a greater level of detail, the Risk Committee of the Supervisory Board, receives and assesses periodical reports containing relevant risk analysis.

The Internal Audit Service is an independent division within NCC's organizational structure and is a part of internal control framework.

The independence of the Internal Audit Service is achieved by complying with the following requirements:

- Supervisory Board oversees the Internal Audit Service directly;
- The Internal Audit Service's activities are not subject to check unless it is stipulated in legal acts and NCC's charter;
- The Internal Audit Service may report to the Supervisory Board about the issues that arise within its activities and make proposals for their resolution. Furthermore, the Internal Audit Service discloses this information to NCC's CEO and the Management Board;
- The Internal Audit Service is subject to independent audit check;
- The Internal Audit Service is not entitled to carry out banking operations and other transactions. The Internal Audit Service's head and employees are not entitled to sign payment and bookkeeping documents as well as other documents related to NCC's risk-taking;
- The Supervisory Board assigns and dismisses the Internal Audit Service's head who reports to the Supervisory Board.

The Internal Audit Service is engaged in:

- carrying out internal control in compliance with Russian legislation, regulatory legal acts and NCC's internal documents;
- conducting checks of the full range of NCC's activities, i.e. every division and NCC's employee;
- exercising control of the effectiveness of measures taken by the divisions and divisions' heads in order to mitigate the risks identified by the Internal Audit Service.

The Internal Audit Service's reports on the progress of the Audit Plans are submitted to the Supervisory Board of NCC at least twice a year. The copies of the reports are sent to the Chairman of the Management Board and the Management Board of NCC. Furthermore, at least once every six months, the Internal Audit Service informs the Supervisory Board on the measures taken to fulfil the recommendations and eliminate the uncovered violations. The copies of these reports are sent to the Chairman of the Management Board and the Management Board of NCC.

The Internal Control Service is included in the internal control framework of NCC. The main functions of the Internal Control Service are: identification of regulatory risk (compliance risk), control of NCC's observance of the effective legislation on clearing and clearing activities, laws on illegal use of insider information and market manipulation. The Internal Control Service is included in the internal control framework of NCC.

The head of the Internal Control Service is appointed and dismissed by the resolution of NCC's CEO. The Head of Internal Control Service is accountable to CEO and Supervisory Board of NCC within several issues regarding legislative requirements for measures against insider information and market manipulation. Internal Control Service is operationally independent from other subdivisions of NCC.

The annual report of Internal Control Service's activities is presented to NCC's CEO and the annual report of Internal Control Service's activities regarding legislative requirements for measures against insider information and market manipulation is presented to the Supervisory Board of NCC. NCC's Internal Control Service rules set

the pattern of reports' regarding compliance of NCC's clearing activities with Clearing Law, regulatory legal acts, Clearing Rules, NCC's Charter and other internal documents.

The terms of reference of the Responsible Employees include setting up the framework for managing individual risks.

Risk Department and the senior officers report directly to the Chairman of the Management Board of NCC, and thus perform their duties independently from the units operating in the risk-taking environment. Risk Department reports are also communicated to the Supervisory Board at least quarterly.

The models and related risk management methodology are examined by the Risk Committee at the Supervisory Board of NCC and approved by the Management Board or the Supervisory Board of NCC.

Key consideration 7:

The board should ensure that the FMI's design, rules, overall strategy, and major decisions reflect appropriately the legitimate interests of its direct and indirect participants and other relevant stakeholders. Major decisions should be clearly disclosed to relevant stakeholders and, where there is a broad market impact, the public.

Identification and consideration of stakeholder interests is carried out by the following measures:

1. through the User Committees of the companies-members of Moscow Exchange, whereto NCC belongs. The main objective of the Committees is to represent the interests of market participants of Moscow Exchange for the purpose of the full and comprehensive consideration of the market participants needs in numerous matters related, inter alia,

to clearing, settlement and registration of operations in the markets of Moscow Exchange, as well as to operation of CCP.

2. Direct interaction via the members of the Supervisory Board and members of the Risk Committee of the Supervisory Board, being the members of the management bodies of the companies operating as participants of the financial market and CMs; in this respect, representatives of CMs shall account for at least half of all members of the Committee.
3. Public events (forums, seminars, consultations).

Conflicts of interest are identified and addressed effectively in accordance with the Procedure of mitigating conflict of interest in NCC.

Conflict of interest may arise whenever: an employee has access to the confidential information, however he/she does not use it in his/her everyday work; if an employee combines the execution and control of a task; an employee may receive valuable gifts, an employee may use inside information in trading, etc.

NCC mitigates these risks by separation of functions, limited information access, information security procedures, high requirements for employees and executive staff.

In addition, the parent company of NCC – Moscow Exchange - being the trading organizer and a public company, is required by the effective legislation to disclose information about material facts and the decisions important for CMs and shareholders, and complies with the above by publishing statements of material facts and decisions at one or several platforms:

- in the news feeds of the authorized

- information agencies;
- at the Interfax website;
- at the official website of Moscow Exchange.

Furthermore, information essential for Clearing members' interests is published at NCC's website directly. NCC discloses at its website Risks Committee MoMs and internal methodological documents that specify key processes within risk management system incl. CCP default waterfall.

Final conclusion on the Principle 2

NCC ensures clarity and transparency of the corporate governance system. The goals and objectives of Moscow Exchange include the objective of strengthening reliability of NCC and improving the risk management framework of NCC in order to ensure stability in the financial market segments it services.

NCC has set breakdown of roles and responsibilities within risk management and internal control. Furthermore, the Supervisory Board is directly involved in building the risk management and internal control frameworks.

To take account of the interests of CMs in course of decision-making, NCC has set up the Risk Committee at the Supervisory Board, which consists of representatives of CMs; Moscow Exchange formed user committees.

The number of independent members of NCC's Supervisory Board is subject to further improvement.

PRINCIPLE 3: FRAMEWORK FOR THE COMPREHENSIVE MANAGEMENT OF RISKS

An FMI should have a sound risk-management framework for comprehensively managing legal, credit, liquidity, operational, and other risks.

Key consideration 1:

An FMI should have risk-management policies, procedures, and systems that enable it to identify, measure, monitor, and manage the range of risks that arise in or are borne by the FMI. Risk-management frameworks should be subject to periodic review.

In its operation, NCC bears the following major risks:

- credit risk;
- market risk;
- liquidity risk;
- operational risk;
- regulatory risk (compliance risk);
- legal risk;
- reputation risk.
- general business risk;
- custodian risk.

NCC manages these risks, whether those arise in course of its clearing activities, or in allocation of temporarily excess cash (own funds investment and the collateral posted by CMs).

The risk management framework of NCC includes a set of procedures, internal documents and measures aimed at risk identification, evaluation and modification of risks, as well as monitoring their status in order to mitigate or optimize NCC's financial exposure due to an adverse development of risk factors.

NCC has developed and implemented Risk-Appetite Framework in order to control the level of most significant risks.

Monitoring of risk-appetite compliance enables timely identification of potential threats. Risk-appetite metrics and their thresholds are set to ensure NCC meets its strategic goals and are subject to annual review.

The major document that governs the risk management activities of NCC is the Rules of Risk Management System organization in Bank NCC.

This document describes the general principles of operation of NCC risk management system and determines the measures taken to manage CCP risks, common for the markets serviced by NCC as a CCP. The specifics and differences in operation of the risk management system in certain markets are described in Clearing Rules of the respective markets.

In addition, NCC has developed and applies the policies and procedures for managing the risks associated with the allocation of own funds and collateral of CMs. Full list of risk management related documents is indicated inside the Rules of Risk Management System organization.

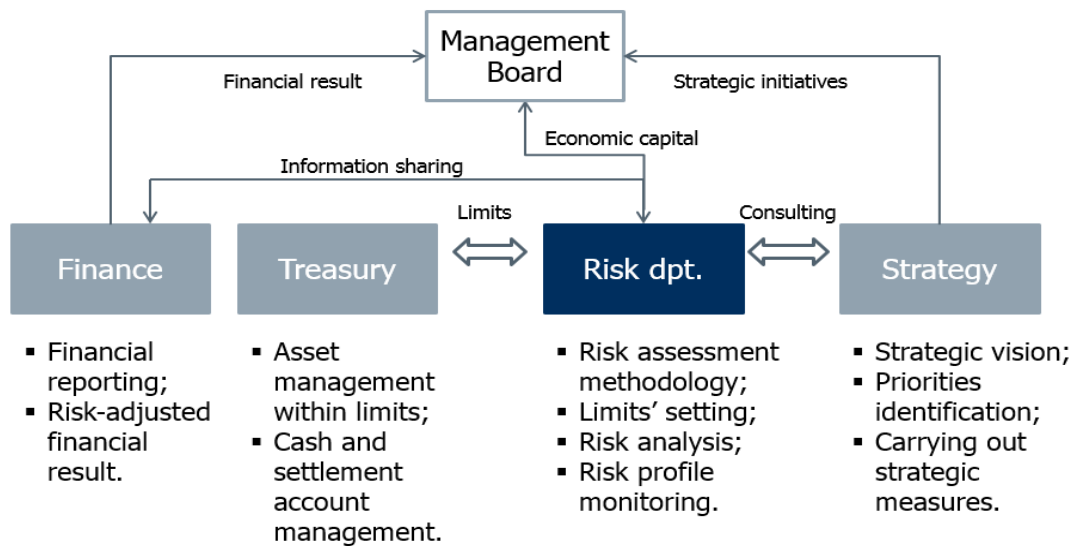

The risk management function is performed using the data from the trading and clearing system, the data from the systems recording treasury operations and general administrative transactions, and the data from external sources about CMs, counterparties, and market indicators. Furthermore, to identify, evaluate and control risks, specialized software products were developed, providing calculation and control of risk parameters, setting limits for operations of CMs and limits for counterparties, and monitoring of the financial condition of CMs and counterparties of Moscow Exchange.

Moreover, persons in charge were

appointed to manage each risk.

The risk-management role is described by the graph:

Control Service on the results of the performed checks of the risk management activities.

The systems used by NCC enable risk aggregation by CM (including CM risks and counterparty risk in other operations) and for products (markets). NCC systems enable the aggregation of data among all of CMs and their clients as well as client accounts segregation (omnibus and individual).

Policies, procedures and risk management systems are designed by Risk Department, coordinated with the relevant interested subdivisions (for instance, Legal department) and approved by the relevant management bodies. Furthermore, Clearing rules and Rules of Risk Management System organization are approved by NCC's Supervisory Board and registered by CBR, thus strengthening risk-management procedures.

The Supervisory Board controls the efficiency of the risk management framework; to this end, it receives reports (incl. back-testing reports) from Risk Department, as well as reports of the Internal Audit Service and Internal

NCC regularly (at least once a year) analyzes and, when necessary, revises the existing policies, procedures and risk management systems in order to reflect the changes in financial market legislation taking into account the development of markets, and the results of the risk evaluation models quality analysis it uses.

Key consideration 2:

An FMI should provide incentives to participants and, where relevant, their customers to manage and contain the risks they pose to the FMI.

The trading and clearing systems disclose information on the requirements/obligations of CM, as well as initial margin requirements and collateral adequacy. In case of a margin call, the CM is notified in accordance with Clearing Rules. Furthermore, NCC discloses all necessary information regarding risks at its website. Thus, CMs are able to manage risks they pose to NCC.

NCC issues initial margin requirements for CMs, timely informs CMs of the arising margin calls and sets penalty rates for the obligations roll-over in case of they are not fulfilled in due time. Moreover, NCC preliminarily discloses information about any changes in risk parameters affecting CMs' collateral adequacy.

In case of CMs' financial condition deterioration or excessive risk concentrations, initial margin requirements for the relevant CMs may be increased.

NCC communicates with CMs via user committees, meetings, and mass media. NCC supplies CMs with regular reports and information.

The systems and policies developed by now enable CMs to limit the risk appetite of their clients by setting individual risk parameters for certain client accounts.

NCC discloses the description and the general provisions of its risk management documents at NCC's website.

Key consideration 3:

An FMI should regularly review the material risks it bears from and poses to other entities (such as other FMIs, settlement banks, liquidity providers, and service providers) as a result of interdependencies and develop appropriate risk-management tools to address these risks.

Material risks are identified via asset concentration monitoring (daily for regulatory purposes).

Major interdependencies are:

- NSD;
- Correspondent banks.

NCC has identified credit risk on the above mentioned entities' exposures as

CMs collateral is deposited there.

NCC has also identified concentration risk across several groups of interdependent counterparties.

Being a CM, NSD carries trade-associated risks on NCC.

It is worth mentioning that NCC has not established any relations with other CCPs, so there are no interdependencies with such Financial Market Infrastructures.

NCC recognizes credit, market, operational, liquidity, legal, regulatory, custodian and reputation risks as material ones.

NCC conducts daily monitoring of open sources, searching for information about any changes in international ratings and general negative information about the counterparties.

NCC analyzes financial standing of NSD on a monthly basis and correspondent banks at least on a quarterly basis and forms necessary provisions. Overwhelming majority of correspondents are top-tier investment grade-rated banks. NSD is a qualified central depository in Russia.

NCC reviews the material risks it bears from other entities at least on a quarterly basis.

The processes for market risk measuring and monitoring are primarily provided by the Methodologies for determining risk parameters in FX, precious metals and securities markets, which describe the processes of spot risk, interest rate risk and settlement price calculation, concentration limit settings, thresholds definition for spot risk range valuation and thresholds definition for price range

valuation, etc.

According to these Methodologies dynamic risk parameters are reviewed a daily or intraday basis and static parameters are reviewed as frequently as necessary.

Operational risk is inherent in the whole activities of Moscow Exchange, so all entities and employees are responsible for its monitoring. To support its measuring and monitoring the internal and external bases for the storage of the accidents happened and losses incurred were established. The accidents are put into the base when they happened and reported at least once a month.

In order to manage the credit risks arising due to the interdependence with other entities, NCC monitors the financial condition of its counterparties, sets the limits on the allocation of funds with counterparties, as well as trade limits. NCC forms reserves for possible losses.

In order to mitigate the risks arising due to interdependence with the settlement banks, NCC diversifies its funds held on the correspondent accounts by moving some portion of the cash from its accounts with the settlement banks to the accounts in other banks with low credit risk (including the correspondent account with CBR). Furthermore, for the purpose of controlling the credit risk, NCC sets limits for such counterparties as regards allocation of funds on the correspondent accounts.

In order to manage FX risk NCC uses VaR instrument that allows to measure the exposure for each currency. Interest rate risk is measured by means of duration methodology. Price and market liquidity risk are estimated using fair price valuation of portfolio (VaR), Sharpe ratio

and basis point price measures.

Stress-testing procedure allows assessment of the size of the main type of risks under stress scenario conditions.

For all kind of risks NCC sets the limits, which are approved by the authorized executive bodies.

The limits are revised at least once a year, as well as in case of changes in the financial indicators of the counterparties. For the provision purposes, quality categories are revised at least once a quarter in accordance with the regulatory requirement, viz. Regulation on formation of reserves for possible losses.

Key consideration 4:

An FMI should identify scenarios that may potentially prevent it from being able to provide its critical operations and services as a going concern and assess the effectiveness of a full range of options for recovery or orderly wind-down. An FMI should prepare appropriate plans for its recovery or orderly wind-down based on the results of that assessment. Where applicable, an FMI should also provide relevant authorities with the information needed for purposes of resolution planning.

NCC has identified key scenarios for activation of NCC Financial Recovery Plan.

Scenarios that may prevent NCC from providing its critical operations are indicated in Financial Recovery Plan. NCC identifies scenarios based on current macroeconomic situation and regulatory framework in Russia and abroad. NCC takes into account CPMI-IOSCO "Consultative report Recovery of financial market infrastructures" as well as CBR commentary on this issue. NCC assesses

and alters the Plan on a yearly basis.

NCC determined 3 scenarios:

- 1) Basic scenario;
- 2) Scenario that involves preventive measures;
- 3) Scenario that involves financial recovery measures (e.g. raising additional liquidity).

These scenarios include incurring losses from mass defaults of CMs and other events. These scenarios are revised at least annually.

Aforesaid scenarios take into account all risks of NCC. Firstly, it is credit risk and market risk, i.e. default of 2 largest CMs. Secondly, it is liquidity risk, i.e. dramatic outflow of initial margin. Furthermore, operational and reputation risks.

The aforementioned strategies enable NCC to continue providing critical services as they include a wide range of possible scenarios and indicate measures to be taken in each scenario. These scenarios cover major risks of NCC.

Moreover, the overall safeguard structure is being updated in order to enable NCC to provide critical operations. For example, in case of default that exceeds NCC's pre-funded resources, NCC's loss capping mechanisms are introduced to ensure compliance with CBR requirements and regulations.

In order to ensure an appropriate speed of response to the potential suspension of normal operating procedures, NCC has developed the Business Continuity Policy and Business Continuity and Recovery Plans. As a result, NCC has implemented a business continuity model which contemplates the measures to be taken to fulfill NCC's obligations in an

emergency. In case of launching the Business Continuity Plan, NCC will focus on prompt recovering of the most critically important business processes, in the medium term – recovering of the non-critical processes, in the long term – recovering of all processes.

Moreover, in accordance with the Financial Recovery Plan, NCC has developed available tools and methods to restore financial stability and preserve business continuity in case of a considerable deterioration of NCC financial condition. The plan describes several major scenarios, each containing the conditions for its realization, the risks, indicators and measures relevant to such scenario and the conditions for its realization.

NCC's Financial Recovery Plan and Business Continuity Plan are revised and updated annually. Business Continuity Policy is updated as often as it is deemed necessary.

The revision of the plan is carried out by divisions in charge and based on changes in regulations and macroeconomic environment. For instance, factors that made an impact on an updated plan (in 2014) include FATCA implementation and economic sanctions against Russian banks and corporations.

Final conclusion on the Principle 3

NCC risk management framework guarantees managing major risks associated with NCC's activities: legal risk, credit risk, operational risk, liquidity risk, etc. The officers responsible for the organization of the risk management process are appointed. All documents regulating the risk management process

are regularly analyzed and, if necessary, revised.

NCC has identified certain scenarios that could prevent NCC from providing clearing services on a continuous and uninterrupted basis; it has developed the measures to restore business continuity and financial stability of NCC.

PRINCIPLE 4: CREDIT RISK

An FMI should effectively measure, monitor, and manage its credit exposure to participants and those arising from its payment, clearing, and settlement processes. An FMI should maintain sufficient financial resources to cover its credit exposure to each participant fully with a high degree of confidence. In addition, a CCP that is involved in activities with a more-complex risk profile or that is systemically important in multiple jurisdictions should maintain additional financial resources sufficient to cover a wide range of potential stress scenarios that should include, but not be limited to, the default of the two largest participants and their affiliates that would potentially cause the largest aggregate credit exposures to the CCP in extreme but plausible market conditions. All other CCPs should maintain, at a minimum, total financial resources sufficient to cover the default of the one participant and its affiliates that would potentially cause the largest aggregate credit exposures to the CCP in extreme but plausible market conditions.

Key consideration 1:

An FMI should establish a robust framework to manage its credit exposures to its participants and the credit risks arising from its payment, clearing, and settlement processes. Credit exposure may arise from current

exposures, potential future exposures, or both.

In accordance with Clearing Rules, NCC takes the following measures to mitigate credit exposures associated with clearing:

- issues financial requirements for CMs;
- issues margin requirements for CMs;
- conducts preliminary control of CMs' collateral when an order is submitted (pre-order validation);
- performs at least daily mark-to-market of the collateral and positions of CMs and controls CMs' collateral adequacy. NCC issues a margin call in case the collateral is insufficient;
- forms Guarantee funds;
- performs at least daily mark-to-market of securities and foreign currency recorded as contributions to the Guarantee funds;
- issues requirements for stress collateral of CMs of category B and O (general CM);
- performs at least daily mark-to-market of the collateral for stress;
- limits its liability in accordance with clause 16 of Clearing Rules.

In addition, NCC regularly conducts:

- monitoring of compliance with financial requirements for CMs (at least monthly);
- monitoring of risk concentrations by groups of related counterparties (monthly);
- assessment of financial conditions of all counterparties (at least quarterly);
- limits for allocation of funds with counterparties, as well as trading limits.
- daily monitoring of the market and external events and factors which can have a significant impact on the counterparties' ability to meet their obligations to NCC.

Review of the credit risk management arrangements is conducted at least once a year, as well as upon changes in the risk profile due to:

- changing market conditions;
- changes in the regulation;
- launch of new products and implementation of projects.

Key consideration 2:

An FMI should identify sources of credit risk, routinely measure and monitor credit exposures, and use appropriate risk-management tools to control these risks.

The sources of credit risk for NCC are identified on the basis of the procedures established by NCC's internal documents.

These procedures include:

- analysis of NCC's activities;
- analysis of NCC operations;
- analysis of NCC's counterparties.

Major sources of credit risk for NCC are:

- exposures to CMs (current and potential negative revaluation of positions and collateral of CMs),
- claims to counterparties and issuers where temporarily excess funds are invested (investment portfolio)
- and settlement organizations (correspondent, clearing and depository accounts).

In order to measure and monitor credit exposures to CMs, NCC conducts pre-order validation checks, to ensure collateral sufficiency.

Furthermore, risk-monitoring systems are integrated into the trade platform to ensure online data availability.

During every clearing session, NCC conducts mark-to-market of CMs' collateral and positions (at least on a daily basis).

NCC continuously carries out online monitoring of CMs' positions and their collateral adequacy.

Volumes of funds in correspondent, clearing and depository accounts are monitored on a daily basis. Concentration and other credit risk limits are monitored on an online basis.

Further to the above, NCC uses the following credit risk control methods:

- Setting margin requirements for CMs;
- Elimination of settlement risk by using the "delivery versus payment" principle or preliminary delivery by CMs;
- Preliminary control of the collateral adequacy before carrying out of trades (pre-order Validation);
- Setting limits (concentration limits; trade limits; price bands);
- Restricting participation in different markets;
- Daily mark-to-market of positions and collateral;
- Changing collateral adequacy requirements for trades;
- Forming provisions for possible losses.

The effectiveness of such methods is measured in comparison with the actually incurred losses, as well as via a number of back testing and stress testing exercises.

Key consideration 3:

A payment system or SSS should cover its current and, where they exist,

potential future exposures to each participant fully with a high degree of confidence using collateral and other equivalent financial resources (see Principle 5 on collateral). In the case of a DNS payment system or DNS SSS in which there is no settlement guarantee but where its participants face credit exposures arising from its payment, clearing, and settlement processes, such an FMI should maintain, at a minimum, sufficient resources to cover the exposures of the two participants and their affiliates that would create the largest aggregate credit exposure in the system.

Not applicable to NCC.

Key consideration 4:

A CCP should cover its current and potential future exposures to each participant fully with a high degree of confidence using margin and other prefunded financial resources (see Principle 5 on collateral and Principle 6 on margin). In addition, a CCP that is involved in activities with a more-complex risk profile or that is systemically important in multiple jurisdictions should maintain additional financial resources to cover a wide range of potential stress scenarios that should include, but not be limited to, the default of the two participants and their affiliates that would potentially cause the largest aggregate credit exposure for the CCP in extreme but plausible market conditions. All other CCPs should maintain additional financial resources sufficient to cover a wide range of potential stress scenarios that should include, but not be limited to, the default of the participant and its affiliates that would potentially cause the largest aggregate credit exposure for the CCP in extreme but plausible market conditions. In all cases, a CCP should document its

supporting rationale for, and should have appropriate governance arrangements relating to, the amount of total financial resources it maintains.

To cover current and future risks to each CM, NCC has set up a safeguard structure, which comprises:

1. individual clearing collateral (initial margin) of the defaulting CM.
NCC accepts most liquid assets as collateral (currencies (RUB, USD, EUR, etc.), shares included in MICEX and RTS indexes, sovereign bonds, corporate bonds included in CBR's Lombard list).
2. Defaulting CM stress collateral (the rules and procedures are in place, currently in the process of implementation);
3. Defaulting CM's contributions to Guarantee funds;
4. NCC's dedicated capital (Skin-in-the-game), formed to cover potential losses in case the defaulting CM's individual clearing collateral and Guarantee funds' contributions are insufficient;
5. Contributions of non-defaulting CMs to Guarantee funds (collective clearing collateral);

Furthermore, NCC has implemented cross-default procedure that allows using any residual value of the defaulting CM's collateral across markets to cover losses caused by its default. Available assets of GS-pooling at the corresponding market can be used within cross-default procedure (GC-Pooling instruments are described at Principle 5. Collateral).

The initial margin covers NCC's potential losses with a confidence level of at least 99%. At least once a day, NCC performs the mark-to-market of claims, liabilities and collateral of CM, and, if the funds are insufficient, it issues margin calls to such

CM.

Other levels of protection are used to cover losses in a stress environment. A simplified stress testing of CMs' positions with standard parameters is conducted daily; furthermore, NCC performs comprehensive stress testing of its financial stability every week and sends the report to NCC's Chief Risk Officer. Comprehensive stress testing (incl. reverse stress testing and assessment of NCC's liquid assets) is carried out on a monthly basis and is sent to the Management Board and the Risk Committee. The Supervisory Board scrutinizes comprehensive stress testing results on a quarterly basis. Furthermore, stress testing reports prepared in accordance with current regulation are sent to CBR every month.

NCC does not clear jump-to-default instruments, such as Credit Default Swaps.

NCC is the largest CCP under the Russian jurisdiction and the only CCP considered systemically important financial market infrastructure by CBR.

No other jurisdiction considers NCC as a systemically important CCP.

In order to cover a wide range of stress scenarios, viz. the potential default of 2 major CMs at once, NCC uses the financial resources:

- 1) Defaulting CM clearing collateral (initial margin);
- 2) Defaulting CM stress collateral (the rules and procedures are in place, currently in the process of implementation);
- 3) Defaulting CM clearing collateral in other markets, pursuant to cross-default

procedures defined in Clearing Rules;

4) Fixed contribution of the defaulting CM to Guarantee fund;

5) NCC's dedicated capital (Skin-in-the-game);

6) Fixed contributions of the non-defaulting CMs to the Guarantee fund;

NCC evaluates the adequacy of its financial resources in stress scenarios as follows:

- on a daily basis – for the positions of CMs;
- on a monthly basis - as of the 1st day of each month during the comprehensive stress testing;
- moreover, NCC may conduct ad hoc stress testing when necessary;

NCC's dedicated capital (Skin-in-the-game) amount is revised at least annually.

The Moscow Exchange User Committees, The Risk Committee of the Supervisory Board and the Supervisory Board discussed and approved the effective safeguard structure and dedicated capital of NCC (Skin-in-the-game); as a result of this discussion, these issues are indicated in Clearing Rules.

Key consideration 5:

A CCP should determine the amount and regularly test the sufficiency of its total financial resources available in the event of a default or multiple defaults in extreme but plausible market conditions through rigorous stress testing. A CCP should have clear procedures to report the results of its stress tests to appropriate decision makers at the CCP and to use these results to evaluate the adequacy of and adjust its total financial resources. Stress tests should be performed daily using standard and

predetermined parameters and assumptions. On at least a monthly basis, a CCP should perform a comprehensive and thorough analysis of stress testing scenarios, models, and underlying parameters and assumptions used to ensure they are appropriate for determining the CCP's required level of default protection in light of current and evolving market conditions. A CCP should perform this analysis of stress testing more frequently when the products cleared or markets served display high volatility, become less liquid, or when the size or concentration of positions held by a CCP's participants increases significantly. A full validation of a CCP's risk-management model should be performed at least annually.

The sufficiency of NCC's financial resources to cover losses from realization of material risks arising from NCC's activities (stress testing of financial resources), includes:

- sufficiency of NCC's aggregate financial resources to cover aggregate losses;
- sufficiency of regulatory capital to meet the regulatory requirements of CBR;
- sufficiency of Guarantee funds.

Sufficiency of aggregate financial resources is determined as the value of total loss coverage ratio, which equals to the difference between the amount of NCC's total financial resources and total losses divided by the amount of NCC's total financial resources * 100%.

Sufficiency of aggregate financial resources can be presented by relation of the following amounts: (Capital + Guarantee Funds - Total Risk) and (Capital + Guarantee funds).

Aggregate losses in case of stress testing

scenarios realization in course of NCC's activities include:

- losses from Defaulters' positions close-out (CCP credit risk);
- losses from non-performance of obligations by NCC's counterparties / bond issuers / (investment credit risk);
- losses from revaluation of NCC's assets and liabilities in case of unfavorable changes in market indicators (market risk).

Stress testing of NCC's financial stability is performed as follows:

- on a monthly basis, as of the first day of each month, unless the higher frequency of stress testing is set;
- on a weekly basis for NCC's management;
- unscheduled stress testing in accordance with a special procedure, if necessary.

Stress testing Management Reports are submitted for review to the Asset Management Committee and the Management Board of NCC on the reporting dates.

The Supervisory Board of NCC receives the Stress testing Management Reports on a quarterly basis.

Based upon the results of the stress testing, NCC's management bodies may, depending on their terms of reference determined by the Articles of Association and other documents of NCC, decide to implement the measures aimed at decreasing the risks assumed by NCC:

- change the value of individual clearing collateral / initial margin calculation methodology;
- change the size of contributions to the Guarantee funds / revise the

approaches of determining the size of contributions to the Guarantee funds;

- increase NCC's capital;
- other measures aimed at mitigating NCC's risks.

The stress testing scenarios are reassessed on a continuous basis. The Risk management Committee of the Supervisory Board revises the effectiveness and appropriateness of stress test assumptions and parameters at least on a quarterly basis.

Validation of the risk management models is conducted by Risk Department. The validation is performed by means of back testing at least once a year.

Key consideration 6:

In conducting stress testing, a CCP should consider the effect of a wide range of relevant stress scenarios in terms of both defaulters' positions and possible price changes in liquidation periods. Scenarios should include relevant peak historic price volatilities, shifts in other market factors such as price determinants and yield curves, multiple defaults over various time horizons, simultaneous pressures in funding and asset markets, and a spectrum of forward-looking stress scenarios in a variety of extreme but plausible market conditions.

In order to define the set of plausible forward-looking stress scenarios NCC takes into account extreme historical changes in risk factors, then applies expert assessment to adjust them to current economic conditions (if necessary).

As a result, stress scenarios include:

- The extreme change in major risk

factors (such as FX rates, stock indices, yield curves, price volatilities) which are defined as described above;

- Defaults of NCC's CMs / bond issuers / counterparties (including a default of largest two CMs and a default of two largest counterparties/ bond issuers from NCC investment portfolio);
- Liquidity squeeze resulting from the outflow of initial margin posted in cash (for liquidity stress tests).

Key consideration 7:

An FMI should establish explicit rules and procedures that address fully any credit losses it may face as a result of any individual or combined default among its participants with respect to any of their obligations to the FMI. These rules and procedures should address how potentially uncovered credit losses would be allocated, including the repayment of any funds an FMI may borrow from liquidity providers. These rules and procedures should also indicate the FMI's process to replenish any financial resources that the FMI may employ during a stress event, so that the FMI can continue to operate in a safe and sound manner.

NCC Clearing Rules define the structure of total financial resources that can be used to cover losses resulting from defaults of any CM.

If these financial resources are not enough to absorb default losses, Clearing Rules enable defaulting CM's loss and position spreading between non-defaulting CMs having positions opposite to the defaulter.

In accordance with Clearing Rules in Securities, FX and Precious metals market, in order to fulfil its obligations

towards non-defaulting CMs, NCC acts in the following order:

- 1) uses its own available cash / securities (for securities market) / precious metals (for FX and precious metals market);
- 2) In case of insufficiency of its own available cash / securities, executes swap trades with CMs, except for CBR (for FX and precious metals market) / CCP REPO trades (for securities market) in order to find a missing asset;
- 3) concludes, in accordance with the cooperation agreement, swap trades with CBR (for FX and precious metals market);
- 4) In case of security / cash shortage executes swap trades (for FX and precious metals market) / REPO trades with the clearing members that hold corresponding claims (for securities market).

The procedures stipulated in the Clearing rules, incl. the procedure of forced closure of the positions, ensure fulfillment of obligations to liquidity providers (non-defaulting clearing members, incl. CBR).

Any funds borrowed from CMs, CBR or other liquidity providers are repaid as the position of the defaulting CM is closed out.

Clearing Rules contemplate the Guarantee fund's replenishment in case any part of the contribution is spent. The funds are replenished within 1 settlement day from the moment the CMs are notified by NCC (3 business days for the Standardized OTC Derivatives Market). The notification is sent by NCC not later than on the day following the day when the contributions to the Guarantee fund are used.

The number of the Guarantee funds replenishments is limited to 6 times a calendar year for all markets beside the Standardised OTC Derivatives Market. The number of replenishments at this market is limited to 3 times a quarter.

Furthermore, the Financial Recovery Plan contemplates NCC's actions in case of its capital reduction down to the level threatening NCC business continuity (approaching the minimum NCC capital adequacy ratios).

Final conclusion on the Principle 4

NCC has established and uses the framework for evaluation, monitoring and management of the credit risks to CMs, settlement organizations and counterparties for the allocation of temporarily excess cash.

On an ongoing basis, NCC identifies current and potential risks to CMs; it has sufficient instruments to manage such risks.

NCC maintains adequate financial resources to cover credit risks to each CM with certain confidence probability (including individual collateral and Guarantee funds).

NCC maintains sufficient aggregate financial resources (including individual collateral, stress collateral, Guarantee funds and NCC's dedicated capital (Skin-in-the-game) to cover the credit risks of at least two largest CMs in extreme but plausible market conditions. CMs' positions are stress tested regularly.

PRINCIPLE 5: COLLATERAL

An FMI that requires collateral to manage its or its participants' credit exposure should accept collateral with low credit, liquidity, and market risks. An FMI should also set and enforce appropriately conservative haircuts and concentration limits.

Key consideration 1:

An FMI should generally limit the assets it (routinely) accepts as collateral to those with low credit, liquidity, and market risks.

NCC determines whether an asset can be accepted as collateral on the basis of regulatory requirements for liquidity, credit quality and market risk (the objective criteria are, e.g.: inclusion in the stock index, Lombard List of CBR, international ratings of certain level, and financial condition of the issuers).

The following types of assets can be accepted as collateral in Moscow Exchange markets:

FX market: foreign currencies and precious metals;

Securities market: foreign currency, government bonds, corporate bonds and shares;

Derivatives market: foreign currencies and shares;

Standardised OTC Derivatives market: foreign currencies;

Commodities market (currency, commodities).

To ensure better flexibility of collateral management system both for CCP and for clearing members NCC started to use GC-Pooling instruments. The use of GC-Pooling in REPO trades with CCP mitigates risks for NCC and at the same

time allows clearing members to benefit from property rights on the assets in pool incl. income rights and opportunity to participate in corporate events.

As an additional benefit of using GC-Pooling clearing members have the right to replace assets in pool and use them to meet their obligations in the securities market and to NCC.

More stringent criteria are applied to assets accepted to GC-Pooling than to assets accepted as collateral.

GC-Pooling assumes a security issued to guarantee the assets in pool. Thus, such security can also be pledged as collateral in the securities market.

The list of eligible collateral is revised at least quarterly.

NCC does not accept collateral on exceptional basis.

The list of assets accepted as collateral is regularly checked for compliance with the existing requirements. In addition, all newly-admitted collateral is checked, and the standard collateral is permanently monitored. The collateral management system does not allow for collateral other than in the list of eligible collateral.

In order to mitigate specific wrong way risk, NCC prohibits all CMs to post collateral consisting of securities issued by such CM or by affiliated parties (except for the Derivatives market where CMs can post collateral in shares issued by such CM or by affiliated parties, but conservative limits and haircuts are applied).

Key consideration 2:

An FMI should establish prudent valuation practices and develop haircuts that are regularly tested and take into account stressed market conditions.

Collateral is marked to market on a daily basis.

NCC sets prices using the current market data on the trades and orders from available sources, and if such data is not current and/or insufficient, NCC applies models to determine current prices (as described in the Methodologies for defining risk parameters).

NCC determines the haircuts applied to the collateral using the same framework for the definition of IM rates.

Haircuts are back tested on a daily basis together with initial margin rates (haircuts are set using the same framework for the definition of IM rates). More detailed information on initial margin back-testing is indicated in Principle 6.

Key consideration 3:

In order to reduce the need for procyclical adjustments, an FMI should establish stable and conservative haircuts that are calibrated to include periods of stressed market conditions, to the extent practicable and prudent.

As it was noted above, NCC sets haircuts based on the same principles employed for determining initial margin requirements, which also consider the need to minimize pro-cyclical adjustments.

Key consideration 4:

An FMI should avoid concentrated holdings of certain assets where this would significantly impair the ability to liquidate such assets quickly without significant adverse price effects.

NCC sets concentration limits based on observed market volumes. Collateral volumes above such levels entail more conservative haircuts.

NCC reevaluates the concentration limits on a monthly basis, and if the currently established limit values significantly deviate from the calculated ones, the parameters are changed.

Key consideration 5:

An FMI that accepts cross-border collateral should mitigate the risks associated with its use and ensure that the collateral can be used in a timely manner.

NCC keeps accepted collateral in foreign currencies with foreign correspondent banks based on agreements with these banks. NCC mitigates the risks of accepting cross-border collateral by choosing reliable correspondent banks (systemically important and investment-grade rated) only as counterparties and ensuring detailed description of rights and obligations in the agreements.

NCC identifies two major components of the legal risk: the risk of violating agreements' terms and the risk of sanctions imposed against NCC, that enables cross-border collateral risk management.

Key consideration 6:

An FMI should use a collateral management system that is well-designed and operationally flexible.

The primary features of NCC's collateral management system include the following:

- The collateral is registered at the same level as the positions are registered for collateral adequacy check;
- NCC collateral management system allows for registration of house and client collateral accounts (omnibus and individual);
- The same accounts at which

collateral is posted are used for deliveries, which provides extra operational flexibility for CMs;

- NCC's collateral management system design provides possibility for intraday collateral withdrawal, pledging, transfer between different accounts, substitution and liquidation (all executed after collateral adequacy check).

CM may use the collateral accounts only to ensure the performance of transactions with NCC, and the right to dispose the collateral in case of CM's failure to meet its obligations to NCC is stipulated in Clearing Law and in Clearing Rules.

Any reuse of the securities provided by CMs as collateral by NCC is impossible. At the same time, NCC is entitled to use the funds provided by CMs in its interests.

Collateral management system is operationally flexible and allows adopting changes in market conditions or in CMs' positions immediately.

If the estimated value of a certain asset accepted as collateral changes significantly, the collateral management system allows adopting new parameters on intraday basis; the new haircuts can be activated immediately if necessary.

Collateral adequacy check is performed by means of current positions and active orders (full pre-order validation is performed at all markets), all positions changes are taken into account immediately.

The team of experts manages and controls the collateral valuation process and monitors collateral adequacy and concentrations in CMs' portfolios.

The responsibilities of all parties involved

in the collateral valuation and monitoring processes are described in the internal procedures.

Final conclusion on the Principle 5

NCC accepts the assets as collateral which meet certain requirements to liquidity, market risk and credit risk.

Collateral values are recalculated (marked-to-market) at least on a daily basis and conservative haircuts are applied in order to take into account market and liquidity risks. The procedure for calculating haircuts follow the same risk management principles applied in the definition of initial margin values. Collateral management system is flexible enough to cover a wide range of situations.

PRINCIPLE 6: MARGIN

A CCP should cover its credit exposures to its participants for all products through an effective margin system that is risk-based and regularly reviewed.

Key consideration 1:

A CCP should have a margin system that establishes margin levels commensurate with the risks and particular attributes of each product, portfolio, and market it serves.

NCC's initial margin calculation uses scenario analysis to determine potential losses of NCC in case a CM undergoes default management procedure. The size of initial margin is determined as the maximum loss among all the adopted scenarios.

Presently, NCC has documented the margin methodology (<http://moex.com/s1682>, <http://moex.com/s1670>,

<http://moex.com/s1694>, <http://moex.com/s1703>). The procedure for scenarios' calculation (other risk parameters' calculation) used to determine the collateral requirements is documented as well.

To make margin methodology transparent and replicable for CMs NCC discloses Clearing Rules and main methodological documents, a number of materials and services including detailed descriptions of margining procedures, current and historical risk parameters, algorithm principles, examples and prototypes on its website. Using disclosed information CMs and their clients can simulate margin requirements. The scope of disclosure allows CMs to understand the principles used in NCC margin methodology and use it in their individual risk models (for spot markets the scope of application allows to fully replicate the margin model).

The determinants of the credit exposures include delivery of assets and cash in spot (FX and securities) and repo markets, and variation margin delivery in Derivatives and Standardized OTC Derivatives markets.

The margin requirements take into account the specifics of price volatility, liquidity and the structure of each serviced product and measure potential losses due to the determinants of the credit exposure events.

All transactions cleared by NCC are subject to pre-order validation, which means that they are all checked against collateral using NCC margin model before they are accepted by trading system, as a result, shortage of required margin to the CM's position cannot occur from new

transactions. Margin shortage may only occur from to mark-to-market and changes in risk parameters.

If the CM has the margin shortage, NCC:

- Prohibits the CM to increase positions (only transactions reducing margin requirement are allowed until the margin shortage is closed);
- Issues a margin call to the CM at the clearing session.

All the actions performed by NCC and CMs, as well as NCC's interaction with the settlement organizations and settlement depositories, are taken in accordance with the timeline set by Clearing Rules. The settlement time is determined taking into account the possibility for performance of payments by the settlement bank, given its location. NCC enforces timelines for margin collection and payments by declaring a CM's default if they fail to fulfill their margin call and closing out the positions of such CM.

Key consideration 2:

A CCP should have a reliable source of timely price data for its margin system. A CCP should also have procedures and sound valuation models for addressing circumstances in which pricing data are not readily available or reliable.

The major source of price data is the current information about the orders and trades of CMs in relevant instruments in the markets of Moscow Exchange. Moreover, as an alternative and for quality control purposes, NCC uses current information delivered by other market information providers.

The pricing data for NCC's margining model is taken from NCC's proprietary data base and reflects the trading activity recorded on Moscow Exchange.

Furthermore, OTC quotes are used from market information providers. Only relevant up-to-date pricing data is used. This is achieved by applying restricted time window for the price data. Reliability of data is achieved by expert opinion. The methodology disclosed at NCC's website describes the criteria used to decide whether the data is reliable and current, as well as their hierarchy in determining NCC's settlement prices.

In these cases, NCC uses theoretical prices determined by means of internal models.

The standard method of evaluation for such models is the out-of-sample test, when the quality is assessed on the basis of reliable information on liquid instruments, which is also excluded from the model's input data. Model validation is performed by risk management. The independent assessment of pricing models is also performed via discussing the pricing methodology with CMs.

Key consideration 3:

A CCP should adopt initial margin models and parameters that are risk-based and generate margin requirements sufficient to cover its potential future exposure to participants in the interval between the last margin collection and the close out of positions following a participant default. Initial margin should meet an established single-tailed confidence level of at least 99 percent with respect to the estimated distribution of future exposure. For a CCP that calculates margin at the portfolio level, this requirement applies to each portfolio's distribution of future exposure. For a CCP that calculates margin at more-granular levels, such as at the subportfolio level or by product, the requirement must be met for the corresponding distributions of future

exposure. The model should (a) use a conservative estimate of the time horizons for the effective hedging or close out of the particular types of products cleared by the CCP (including in stressed market conditions), (b) have an appropriate method for measuring credit exposure that accounts for relevant product risk factors and portfolio effects across products, and (c) to the extent practicable and prudent, limit the need for destabilising, procyclical changes.

The major approach this model uses is the search for the worst scenario. The initial margin model takes into account the specifics of instruments and, therefore, it is used with small variations aiming to adapt to the specifics of each instrument.

In the FX, securities and money markets, due to linearity of instruments relative to the risk factors, a simplified approach is used, which features two scenarios for each underlying risk factor (up and down), also taking into account the size of the position, by means of concentration limits. The approach used in the Derivatives market is chosen subject to possible inclusion of non-linear instruments in the position, and, therefore, the set of spot risk scenarios expands to 23, and the scenarios of possible alteration of implied volatility are considered.

The margin model assumptions are the following:

- The potential future exposures arise from possible price fluctuations resulting in revaluation of CMs positions.
- Losses resulting from price fluctuations during the liquidation period in case of a CM's default should be covered by initial margin

as the first level of protection in normal market conditions.

- The margin requirement is calculated at portfolio level, nevertheless, NCC includes only those portfolio effects in the margin model that are fundamentally justified and validated.

The standard liquidation horizon used in the model equals 2 days (vs. 3 days for the Standardized OTC Derivatives market). Besides, the model was supplemented with liquidity allowance, which takes into account the possibility of price effects in case of liquidation, when the position size exceeds the market

average. The standard required confidence probability is at least 99%.

When determining closeout period for each CCP product, NCC takes into account the product's current liquidity status (trading volumes, etc.), the possible liquidity outflow from a specific product, and also considers the entire range of possible hedging instruments in general. On spot markets, where liquidity is deemed more vulnerable to liquidation of large positions, NCC also uses initial margin add-ons for positions in each product exceeding the concentration limits. The limits and add-ons are determined based on the assumption of gradual close-out carried out during extended period to avoid drastic change in the asset's price limit.

When determining the risk parameters, NCC uses the data including stress periods (for the last 10 years), taking into account the qualitative features such as relevance of the data used in terms of the changed macroeconomic structure and relevance of the instrument-specific risk factors effective during the available time period. Besides historical data, NCC also

uses forward-looking scenarios relevant for current economic conditions for initial margin rates calculation.

Depending on the liquidity structure of portfolio instruments and the hedging effect inside the defaulter's portfolio, NCC chooses an optimal position liquidation strategy in terms of loss minimization.

In order to address possible procyclicality in the margin model, when setting initial margin rates NCC:

- Includes periods of high volatility in historical observations used for initial margin rates calculation;
- Considers not only volatility measures calculated based on historical data, but also ad-hoc scenarios relevant to current economic situation to get forward-looking initial margin rates.

Key consideration 4:

A CCP should mark participant positions to market and collect variation margin at least daily to limit the build-up of current exposures. A CCP should have the authority and operational capacity to make intraday margin calls and payments, both scheduled and unscheduled, to participants.

NCC carries out pre-order validation of all transactions, thus no margin shortfalls may arise due to trading activity of CMs.

The variation margin model and relevant calculations are described in the relevant Clearing Rules.

In the FX and Securities markets, as well as in the Standardized OTC Derivatives market, margin calls are issued once a day during the clearing session. In the FX and Securities markets, the clearing session is held in the morning before

opening, and margin calls shall be paid not later than at 17:30 on the day when the margin call was issued. In the Standardized OTC Derivatives market, the clearing session is held at 17:00, and margin calls shall be paid within one business day.

In the Derivatives market, variation margin calls are issued twice a day during the intraday or evening clearing session, and must be paid not later than 45 minutes prior to the start of the next clearing session.

Clearing Rules do not stipulate sending intraday variation margin calls, however the pre-order validation procedure can be considered as a substitute for intraday variation margin calls: in case of a sharp market move, NCC can increase initial margin rates intraday, and CMs with margin shortage are banned from increasing their positions until their collateral is sufficient to meet the margin requirements.

Full pre-order validation procedures together with the ability to change initial margin requirements intraday essentially reduces the necessity of intraday variation margin calls.

Key consideration 5:

In calculating margin requirements, a CCP may allow offsets or reductions in required margin across products that it clears or between products that it and another CCP clear, if the risk of one product is significantly and reliably correlated with the risk of the other product. Where two or more CCPs are authorized to offer cross-margining, they must have appropriate safeguards and harmonized overall risk-management systems.

NCC does allow margin offsets in case of

opposite positions in the instruments with identical underlying assets if there is a gap between the settlement dates. NCC controls reliability of the portfolio effect by adhering to conservative approach of providing offsets only for portfolios with opposite positions in instruments with identical underlying assets, i.e. no offsets are allowed between products without fundamentally related underlying assets, even if they show strong correlation according to historical data. The amount of the margin offset provided by NCC to the CM could vary from 50% (for calendar spreads on Derivatives market) to full offset with an add-on depending on the maturity gap (for spot markets because of shorter maturity gaps).

To measure its potential future exposure on the product and portfolio level NCC uses a worst case scenario algorithm that is applied online to every CMs portfolio. First all CMs positions are grouped in sub-portfolios based on underlying assets/risk-factors. After that for each instrument in each sub-portfolio possible P&Ls are calculated applying pre-defined joint margin scenarios. At last the margining algorithm calculates worst case scenarios for each sub-portfolio regarding possible future joint market movements in the prices of instruments from different sub-portfolios.

NCC does not have any cross-margining arrangements with other CCPs.

In respect of the real and simulated portfolios, NCC applies the procedures similar to the methodology reliability check for instrument margin.

Key consideration 6:

A CCP should analyse and monitor its model performance and overall margin coverage by conducting rigorous daily

backtesting – and at least monthly, and more-frequent where appropriate, sensitivity analysis. A CCP should regularly conduct an assessment of the theoretical and empirical properties of its margin model for all products it clears. In conducting sensitivity analysis of the model’s coverage, a CCP should take into account a wide range of parameters and assumptions that reflect possible market conditions, including the most-volatile periods that have been experienced by the markets it serves and extreme changes in the correlations between prices.

Initial margin rates are back tested on a daily basis when determining the risk parameters based on the frequency of initial margin shortfalls.

For the purpose of regulatory back testing the frequency and size of initial margin rates shortfalls are also tested. Regulatory back testing includes the most stressed time period within the last 10 years and is performed on the instrument-level basis at least monthly. Back testing results are considered satisfying if for all the instruments the historical frequency of initial margin rate breaches is less than 1%, and the size of breach is not more than 60% (related to initial margin rate).

Considering portfolio effects are taken into account for IM calculation only for instruments with the same underlying assets, back testing of individual components gives a high level of assurance for portfolio effects.

Sensitivity analysis is included in reverse stress testing framework. Reverse stress testing is done once a month. NCC calculates the indicators of the CCP's capital sensitivity (risk protection level) to

parameters’ changes, and checks compliance with the confidence probability limits (at least 99%).

Due to the simplicity of the margin model in regards with portfolio margining, its potential shortcomings are overestimation of the risks of decorrelation of instruments for one underlying asset (for Derivatives market) and the impossibility of “covered sales” registration (for Derivatives market).

Despite the fact that NCC has never faced the situation, the procedure includes identifying whether it is a technological or methodological problem. In case of technological problem the deficiencies will be promptly tackled. In case of methodological problem the methodology will be reviewed and subject to approval by the Risk Management Committee of the Supervisory Board.

NCC informs its Management Board, Supervisory Board and CBR about stress tests and back tests results at least on a quarterly basis.

Key consideration 7:

A CCP should regularly review and validate its margin system.

NCC’s Risk Department performs back testing and validation of the model parameters on a monthly basis.

NCC’s Risk Department submits for review the results of the model quality assessment and any change suggestions to NCC’s internal management bodies (including the Risk Committee and the Management Board), the results are also submitted to the User’s Committees for discussion purposes.

NCC discloses the information to its Management Board, Supervisory Board

and CBR in accordance with the regulations established by CBR's regulatory acts.

Final conclusion on the Principle 6

NCC covers its exposures to CMs with sufficient degree of probability by means of the margin system (individual clearing collateral and other collateral contemplated by the relevant Clearing Rules).

NCC provides its coverage of potential exposures to CMs' positions with the confidence probability of at least 99%.

The collateral is marked-to-market once a day, and if the collateral is insufficient, the CMs receive margin calls. Although there are no intraday variation margin calls, NCC can increase initial margin requirement intraday, which together with full pre-order validation gives the instrument for keeping under control CMs' risks.

In order to check the quality of margin models, these models are subject to validation, including back testing, and the results of such back testing are submitted to CBR.

Model validation is an independent process.

PRINCIPLE 7: LIQUIDITY RISK

An FMI should effectively measure, monitor, and manage its liquidity risk. An FMI should maintain sufficient liquid resources in all relevant currencies to effect same-day and, where appropriate, intraday and multiday settlement of payment obligations with a high degree of confidence under a wide range of potential stress scenarios that should include, but not be limited to, the default

of the participant and its affiliates that would generate the largest aggregate liquidity obligation for the FMI in extreme but plausible market conditions.

Key consideration 1:

An FMI should have a robust framework to manage its liquidity risks from its participants, settlement banks, nostro agents, custodian banks, liquidity providers, and other entities.

NCC's liquidity management framework comprises the following elements:

- distribution of roles and responsibilities concerning liquidity management;
- procedures for managing and supervising NCC's liquidity status;
- information system for collection and analysis of NCC's liquidity data;
- a set of methodologies, statutory ratios and action plans aimed at ensuring efficient management and control of liquidity status;
- internal management reporting to support the decision-making on efficient management and control of liquidity status.

NCC's liquidity management procedures cover various forms (emergence factors) of liquidity risk:

- operating liquidity risk arising due to NCC's inability to timely meet its current obligations due to the existing structure of current cash credits and debits – operating analysis and control of liquidity;
- risk of mismatch between the amounts and dates of repayment of claims and obligations – analysis and assessment of prospective liquidity (GAP analysis);
- risk of unforeseen claims on liquidity, i.e. the consequences of the risk that unforeseen future events may claim more resources than allocated for

this purpose - stress testing.

The nature of NCC's liquidity needs is settlement and collateral withdraws by CMs. The size accounts for funds required to settle transactions and potential collateral withdraws.

Liquidity risk posed by an individual entity or group of related entities playing multiple roles with respect to NCC is mostly limited to their individual roles as CMs or liquidity providers, basically because NCC doesn't consider CMs as reliable liquidity providers in case of CM's default.

Key consideration 2:

An FMI should have effective operational and analytical tools to identify, measure, and monitor its settlement and funding flows on an ongoing and timely basis, including its use of intraday liquidity.

The settlement and financial cash flows are monitored by means of the on-line data from clearing systems, settlement and treasury liquidity management systems. The analytical tools for measuring and monitoring liquidity are GAP analysis and the statistical analysis of settlement and funding flows using the methodology similar to value-at-risk.

Key consideration 3:

A payment system or SSS, including one employing a DNS mechanism, should maintain sufficient liquid resources in all relevant currencies to effect same-day settlement, and where appropriate intraday or multiday settlement, of payment obligations with a high degree of confidence under a wide range of potential stress scenarios that should include, but not be limited to, the default of the participant and its affiliates that would generate the largest aggregate payment obligation in extreme but

plausible market conditions.

Not applicable to NCC.

Key consideration 4:

A CCP should maintain sufficient liquid resources in all relevant currencies to settle securities-related payments, make required variation margin payments, and meet other payment obligations on time with a high degree of confidence under a wide range of potential stress scenarios that should include, but not be limited to, the default of the participant and its affiliates that would generate the largest aggregate payment obligation to the CCP in extreme but plausible market conditions. In addition, a CCP that is involved in activities with a more-complex risk profile or that is systemically important in multiple jurisdictions should consider maintaining additional liquidity resources sufficient to cover a wider range of potential stress scenarios that should include, but not be limited to, the default of the two participants and their affiliates that would generate the largest aggregate payment obligation to the CCP in extreme but plausible market conditions.

The liquid funds are the assets formed of the clearing collateral and NCC's own funds, and the agreements on liquidity provision to NCC, whereunder these resources may be used to perform NCC's obligations, including obligations to CMs.

The sufficiency of liquid funds to perform NCC's obligations in full as they mature (liquidity stress testing) is determined by liquidity ratios that account for liquidity gaps by maturities and currencies on different time horizons.

To generate the stress testing scenarios for liquid resources the outflow of individual clearing collateral resources is

modelled:

- outflow of individual clearing collateral resources for the three largest balances of CMs;
- outflow of up to 100% of the individual clearing collateral resources, calculated in accordance with the Methodological Recommendations for Liquidity Analysis of NCC;

Given the use of the liquidity stress testing parameters, there is no liquidity gaps. Reverse liquidity stress-testing shows that liquidity ratios for the scope of currencies become negative at the modeled outflow of 90% of client funds within 2 days and 100% within 180 days.

The liquidity stress inputs are calculated on a weekly basis.

NCC activities do not have more complex risk profile and is not systemically important in multiple jurisdictions.

Key consideration 5:

For the purpose of meeting its minimum liquid resource requirement, an FMI's qualifying liquid resources in each currency include cash at the central bank of issue and at creditworthy commercial banks, committed lines of credit, committed foreign exchange swaps, and committed repos, as well as highly marketable collateral held in custody and investments that are readily available and convertible into cash with prearranged and highly reliable funding arrangements, even in extreme but plausible market conditions. If an FMI has access to routine credit at the central bank of issue, the FMI may count such access as part of the minimum requirement to the extent it has collateral that is eligible for pledging to (or for

conducting other appropriate forms of trades with) the relevant central bank. All such resources should be available when needed.

The main sources of liquid assets for NCC are:

- cash of CMs deposited as collateral;
- cash comprising the Guarantee funds;
- NCC's own funds.

To form the reserve of liquid assets, NCC maintains a sufficient amount of funds at clearing accounts with NSD, correspondent accounts at CBR and reliable correspondent banks, in order to ensure timely settlement. As of June 1st, 2016 the volume of funds on the correspondent and clearing accounts equaled 704 bn. RUB.

In addition, NCC has access to the following liquidity sources, which may be used if necessary in the times of market stress.

- Overdraft with CBR (available on demand and can total up to RUR 30 bn, Volume of collateral under the loans of CBR, subject to the adjustment factor)
- Lombard loan of CBR/ REPO trade (available within 1-7 days after request; volume of REPO trade with CBR is limited to NCC's securities portfolio eligible for such trade);
- SWAP with CBR (available on demand; features and volume are indicated in the agreement);
- Overdrafts with foreign banks (available on demand; features and volume are subject to change).

The size and availability of NCC's liquid resources fully enable it to settle clearing obligations on time.

Key consideration 6:

An FMI may supplement its qualifying liquid resources with other forms of liquid resources. If the FMI does so, then these liquid resources should be in the form of assets that are likely to be saleable or acceptable as collateral for lines of credit, swaps, or repos on an ad hoc basis following a default, even if this cannot reliably prearranged or guaranteed in extreme market conditions. Even if an FMI does not have access to routine central bank credit, it should still take account of what collateral is typically accepted by the relevant central bank, as such assets may be more likely to be liquid in stressed circumstances. An FMI should not assume the availability of emergency central bank credit as a part of its liquidity plan.

NCC may use investment securities portfolio as collateral to raise cash, should it not be used to obtain qualifying liquid resources.

NCC forms investment portfolio of the securities included in the Lombard List of CBR only; therefore it provides some confidence in their liquidity. Even if this cannot be reliably prearranged or guaranteed in extreme market conditions, NCC expects that they are saleable (or acceptable as collateral not only by CBR, if this is needed).

Key consideration 7:

An FMI should obtain a high degree of confidence, through rigorous due diligence, that each provider of its minimum required qualifying liquid resources, whether a participant of the FMI or an external party, has sufficient information to understand and to manage its associated liquidity risks, and that it has the capacity to perform as required under its commitment. Where

relevant to assessing a liquidity provider's performance reliability with respect to a particular currency, a liquidity provider's potential access to credit from the central bank of issue may be taken into account. An FMI should regularly test its procedures for accessing its liquid resources at a liquidity provider.

The liquidity providers' financial conditions are assessed on a quarterly basis in accordance with the internal rating methodology, and their debt servicing quality. The overall volumes of claims and obligations to the liquidity providers are assessed daily.

Within Russia CBR itself is deemed to be the most reliable liquidity provider for NCC, commercial banks can be accounted as potential liquidity providers only if they have access to refinancing in CBR as well. All foreign liquidity providers are either systemically important or at least investment-grade rated organizations.

The counterparty assessment methodology is regularly tested and revised in case of any changes in market conditions and the composition of counterparties. The adequacy of the obtained assessment results is compared to the expert opinions at least once a year.

Key consideration 8:

An FMI with access to central bank accounts, payment services, or securities services should use these services, where practical, to enhance its management of liquidity risk.

NCC has access to the services of CBR in course of making payments and settlements in RUB, and it is qualified to obtain liquidity from CBR.

NCC maintains the above arrangements in state of permanent readiness and uses those if necessary.

The settlement banks are selected by their credit quality and operating potential to conduct payments and settlements in respective currency. The infrastructure of commercial banks is used in cases when the infrastructure of CBR and NSD cannot be used. In course of making payments and settlements in foreign currencies, NCC uses the services of foreign settlement banks (including relevant central banks), as well as the Russian settlement organizations, viz. NSD and commercial banks.

Presently, NCC uses the entire range of services of CBR available to its tools.

Key consideration 9:

An FMI should determine the amount and regularly test the sufficiency of its liquid resources through rigorous stress testing. An FMI should have clear procedures to report the results of its stress tests to appropriate decision makers at the FMI and to use these results to evaluate the adequacy of and adjust its liquidity risk-management framework. In conducting stress testing, an FMI should consider a wide range of relevant scenarios. Scenarios should include relevant peak historic price volatilities, shifts in other market factors such as price determinants and yield curves, multiple defaults over various time horizons, simultaneous pressures in funding and asset markets, and a spectrum of forward-looking stress scenarios in a variety of extreme but plausible market conditions. Scenarios should also take into account the design and operation of the FMI, include all entities that might pose material liquidity risks to the FMI (such as settlement

banks, nostro agents, custodian banks, liquidity providers, and linked FMIs), and where appropriate, cover a multiday period. In all cases, an FMI should document its supporting rationale for, and should have appropriate governance arrangements relating to, the amount and form of total liquid resources it maintains.

NCC conducts the stress testing of its liquid resources on a monthly basis, using the scenarios described in the corresponding answers.

The management reporting on stress testing of liquid resources, which is included in the comprehensive report on the results of stress testing of NCC's financial stability as of the reporting dates, is submitted for approval to the Management Board of NCC.

The data contained in the management reporting on stress testing are provided to the Supervisory Board of NCC.

Liquidity stress testing is performed in accordance with the framework of stress-testing procedure.

The stress scenarios are generated using the changes in risk factors related to basic market indicators, such as:

- Change of RUB rate against the basket of USD and EUR currencies;
- Moscow Exchange Index;
- Interest rates;
- Index volatility.

The use of a DvP settlement model and the possibility to net the defaulters positions are incorporated in the loss calculation model defined by the stress-testing procedure.

The withdrawal of funds caused by NCC's need to fulfil its obligations to CMs in case

of CMs default is modeled by means of an indicator similar to VaR with the confidence level of 99.99%.

The historical and hypothetical scenarios are revised at least once a month, and the Methodology – once a year. Furthermore, the scenarios may be revised upon the initiative of the risk management unit if deemed necessary (for example, if market conditions have changed).

The risk management model is validated via back testing and independent assessment at least annually.

NCC has adopted two documents regulating the procedure of liquidity calculation: the regulation on the stress testing procedure and the liquidity analysis methodology.

Key consideration 10:

An FMI should establish explicit rules and procedures that enable the FMI to effect same-day and, where appropriate, intraday and multiday settlement of payment obligations on time following any individual or combined default among its participants. These rules and procedures should address unforeseen and potentially uncovered liquidity shortfalls and should aim to avoid unwinding, revoking, or delaying the same-day settlement of payment obligations. These rules and procedures should also indicate the FMI's process to replenish any liquidity resources it may employ during a stress event, so that it can continue to operate in a safe and sound manner.

To enable NCC to fulfil trade obligations, NCC's rules and procedures contemplate the provision of collateral available for settlements by CM.

The collateral provided by CMs is deposited on NCC's clearing accounts in the settlement organization and is recorded by NCC for the respective CMs in the clearing registers.

The trade obligations (settlements) are performed during the clearing session by means of NCC changing the values of the clearing registers where the collateral posted by CMs is recorded.

If the size of the collateral provided by CM exceeds the required collateral value calculated by NCC for this particular CM, then such CM may transfer the excess collateral from NCC's clearing account to its own account.

NCC shall possess the required cash amount.

If the collateral is insufficient to settle the trades executed by one or several CMs, NCC performs its obligations to those CMs who have performed their obligations to NCC, out of resources of the Guarantee fund and also using its own resources within the liability limit. The Guarantee fund is formed out of the contributions of all CMs.

To prevent further default on trade obligations, NCC may apply to CM who fails to perform its obligations to NCC the procedure of trades termination (positions close-out).

In the Securities market, NCC and the defaulting CM having total net obligations in cash/securities fully or partially uncovered by collateral, execute NCC's REPO trades and/or loan agreements. To perform obligations to the non-defaulting CM, NCC uses free own cash and/or own securities, and if these are insufficient, it executes the REPO trades and/or Loan Agreements with CMs.

In the FX market and Precious metals market, in case of partial or full non-performance by CM of its total net obligations in relevant currency / relevant precious metal, the 2nd type additional session is held. During this session the buy and sell trades in foreign currency / precious metals, including swap trades, swap contracts and futures contracts are executed between the defaulting CM and NCC without submitting orders. To perform its obligations to the non-defaulting CM, NCC uses free own cash / precious metals, and if these are insufficient, it executes swap trades in the following sequence: with the authorized trading participants (except CBR), with CBR, and with the non-defaulting CMs.

In the Derivatives market, if a margin call is not paid by the defaulting CM, a mandatory positions' close-out is carried out for all sections of the positions register.

The replenishment of any liquidity resources employed during a stress event is incorporated in the default management process.

Final conclusion on the Principle 7.

NCC has set up and operates a comprehensive framework for managing the liquidity risk arising in course of NCC's activities. The liquidity risk management framework identifies and analyzes various sources of liquidity risk (CMs, settlement organizations and liquidity providers), including the treasury's monitoring of intraday liquidity and maintaining its adequacy. In case of market stress NCC is able to raise liquidity from CBR and top-tier foreign banks promptly.

PRINCIPLE 8: SETTLEMENT FINALITY

An FMI should provide clear and certain final settlement, at a minimum by the end of the value date. Where necessary or preferable, an FMI should provide final settlement intraday or in real time.

Key consideration 1:

An FMI's rules and procedures should clearly define the point at which settlement is final.

The settlement of payment, transfer instruction or other obligation is final at the moment when the funds are credited to the correspondent account of the settlement organization. The obligations admitted to clearing are deemed to be settled (discharged) from the moment when NCC changes the values of the clearing registers where the collateral provided by CM is recorded. This procedure is described in Clearing Rules disclosed at NCC's website.

The reports on the changes in the clearing registers is provided to CMs upon the results of the clearing session.

In the Securities market, trade settlements are final after the change of values of the clearing registers where the collateral of CM for the amount of the performed total net obligation / net claim in cash is recorded, and after receipt of the report on the performance of transactions on the sections from the settlement depository.

In the FX market, trade settlements are final after the change of values of the clearing registers where the collateral of CM for the amount of the performed total net obligation / net claim is recorded.

In the FX market, the obligation of NCC to refund cash to CM is deemed to be performed after the settlement organization or the settlement bank where NCC opened its clearing bank account or correspondent account to record the collateral, writes off the cash from the relevant account of NCC.

In the Precious metals market, trade settlements are final after the relevant precious metal is credited to the collateral account of CM.

In the Derivatives market, variation margin settlements are final at the moment the cash collateral registers are changed.

The moment of settlement finality is defined by Clearing Rules. Information about the timeline of trade settlements in the securities market is disclosed to CMs in the reports provided by NCC.

In the Standardized OTC Derivatives market, trade obligations (settlements) are deemed to be performed during the clearing session when NCC changes the values of the clearing register where the collateral provided by CM is recorded.

In the Commodities market, trade settlements are considered to be executed after the commodity delivery operator (structural division of NCC) executes the order for commodities's transfer and after the receipt of the internal notice.

The procedure for the performance of clearing obligations is stipulated in NCC Clearing Rules indicating that the obligations included in the clearing pool are terminated within the clearing session. CM's payment obligations are offset against NCC's obligation to repay the individual clearing collateral.

According to the Federal Law No. 7-FZ "On Clearing, Clearing Activities and Central Counterparty", the invalidity of a treaty, the obligations under which were terminated as a result of netting, does not imply the invalidity of transactions made in the course of the netting and netting results.

The Clearing Agreements between CMs and NCC are executed within the Russian jurisdiction, and the applicable law is the law of the Russian Federation. NCC does not provide clearing services in other jurisdictions. According to the Federal Law No. 7-FZ "On Clearing, Clearing Activities and Central Counterparty", suspension of operations on the trading or clearing accounts are not allowed in respect of the property, which is necessary for the performance (termination) of obligations admitted to clearing. The rules established by this Article apply with respect to Russian and foreign entities.

However NCC's accounts at foreign banks (settlement organizations) are beyond Russian jurisdiction, thus laws of the foreign states apply to these contractual relations if the agreement between NCC and the foreign bank does not indicate otherwise.

The settlement depository and settlement organization send settlement reports to NCC. NCC obligations are discharged upon the discharge of obligations in the settlement depository and the settlement organization.

Key consideration 2:

An FMI should complete final settlement no later than the end of the value date, and preferably intraday or in real time, to reduce settlement risk. An LVPS or SSS should consider adopting RTGS or

multiple-batch processing during the settlement day.

NCC's time regulations are designed to ensure that settlements would be completed on the value date.

In the Standardized OTC Derivatives market, the obligations with current maturity are fulfilled during the clearing session. The clearing sessions are held every business day.

NCC has never experienced deferral of final settlement which was not contemplated by NCC's rules. In any circumstances NCC does its best to conduct timely settlements for non-defaulting CMs.

In the FX market and Precious metals market, obligations can be fully or partially performed on an intraday basis.

In the Securities market, obligations can be performed on an intraday basis upon consent of the counterparty, by executing intraday and due trades, or by submitting urgent settlement orders (to be fulfilled online).

According to the time regulations, trade obligations are performed twice a day: during the trading and upon the results of the trading (for performance on an intraday basis).

In the Derivatives market, there is an intraday clearing session to determine and perform obligations to pay variation margin (for performance on an intraday basis).

NCC performs cash obligations in RUB by means of multivoyage payment processing system for the payments of CBR via Banking electronic immediate payments.

In the Standardized OTC Derivatives

market, the obligations with current maturity are fulfilled during the clearing session by means of changing the values of the clearing registers, i.e. on an intraday basis and in real-time mode.

CMs are informed by means of reports upon conclusion of the clearing session.

Early settlement in the securities market is conducted from 04:00 p.m. to 05:00 p.m., and the settlements upon the trading results are performed from 07:00 p.m. to 08:00 p.m.

In Derivatives market, the intraday clearing session is held from 02:00 p.m. to 02:03 p.m., and the evening clearing session is held from 06:45 p.m. to 07:00 p.m.

The trades included in the settlements in any given clearing session, will not be included in the next clearing session.

Key consideration 3:

An FMI should clearly define the point after which unsettled payments, transfer instructions, or other obligations may not be revoked by a participant.

Transfer instructions cannot be revoked (except cash withdrawal orders in the FX market and Precious metals market). In the FX market and the Precious metals market, cash withdrawal orders cannot be revoked once it has been cancelled. Cash withdrawal orders may be sent during the day until the moment indicated in the timeframe. The accurate list of currencies and time of cash withdrawal orders are indicated in the Appendix to Clearing Rules.

Cash withdrawal orders can be revoked by the sending CM within timeframe set in the FX and the Precious metals markets Clearing Rules.

Extension is not allowed.

The timelines for submission and fulfillment of instructions by CMs are determined by the time regulations which constitute an appendix to the respective Clearing Rules of NCC.

Final conclusion on the Principle 8

NCC's rules and procedures clearly define the moment of settlement finality, and this information is provided in the relevant Clearing Rules available to CMs.

According to NCC's rules and procedures, all the settlements are executed at least daily, and CMs are provided with various options for intraday performance of obligations, depending on the market.

NCC clearly defines the moment whereafter the unsettled transfer instructions are no longer revocable.

PRINCIPLE 9: MONEY SETTLEMENTS

An FMI should conduct its money settlements in central bank money where practical and available. If central bank money is not used, an FMI should minimise and strictly control the credit and liquidity risk arising from the use of commercial bank money.

Key consideration 1:

An FMI should conduct its money settlements in central bank money, where practical and available, to avoid credit and liquidity risks.

NCC does not conduct money settlements on its own. To conduct money settlements in RUB, NCC uses the payment system of CBR and the payment system of NSD. To conduct settlement in foreign currency NCC uses correspondent accounts in foreign banks and the

payment system of NSD.

Key consideration 2:

If central bank money is not used, an FMI should conduct its money settlements using a settlement asset with little or no credit or liquidity risk.

The main currencies used for settlement are fully convertible and liquid. Should a settlement require the use of another currency, NCC chooses a respective settlement bank in the country of origin. NCC assesses its credit exposure to settlement organizations (including central banks) via internal ratings and via international credit rating requirements set for that purposes. To mitigate risks, NCC sets credit risk and liquidity limits. NCC's own cash can also be used to meet additional liquidity requirements for clearing and settlement, if required. These measures ensure that risks arising from using commercial bank money are adequately managed and mitigated.

NCC applies special criteria when selects settlement banks. It verifies both operational reliability and ability to ensure settlements as scheduled, and the results of counterparty credit quality analysis. For foreign settlement banks, for instance, one of the mandatory criteria of credit quality assessment is the investment-level international rating.

The list of settlement banks that NCC currently uses is disclosed at NCC website

<http://www.nkcbank.com/viewCatalog.do?menuKey=42>

Key consideration 3:

If an FMI settles in commercial bank money, it should monitor, manage, and limit its credit and liquidity risks arising from the commercial settlement banks. In particular, an FMI should establish and

monitor adherence to strict criteria for its settlement banks that take account of, among other things, their regulation and supervision, creditworthiness, capitalisation, access to liquidity, and operational reliability. An FMI should also monitor and manage the concentration of credit and liquidity exposures to its commercial settlement banks.

Counterparties are subject to assessment on an at least quarterly basis, while resident banks are subject to monthly assessment. Assessment procedure is conducted in accordance with the internal rating methodology and also implies the analysis of companies' obligations performance to Moscow Exchange.

Credit risks are measured and monitored at least quarterly based on the data disclosed in companies' financial statements publicly available or provided to NCC upon request. In addition, financial indicators of CMs are monitored monthly. NCC conducts daily open sources monitoring with the focus on information about changes in international ratings of its counterparties and any negative information about them.

The operational control of NCC's liquid position is conducted by the treasury operations center based on the following:

- data on NCC's liquidity position at the beginning of the operational day, i.e. balances on nostro accounts for major currencies on the morning of the current day;
- data on the interbank loans received and provided by NCC, and about other liquid assets;
- data on the cash flows received from Group's members;
- data on the expected balance of

credits/debits of the funds provided by clients-CMs;

- data on the payments to buy/sell securities;
- data on own conversion transactions;
- data on specific payments related to business administration;
- data on other transactions affecting liquidity position.

Operational analysis and liquidity control is conducted separately for currencies in which NCC performs transactions.

If there is a shortage of operating liquidity in normal market conditions, the following actions can be taken:

- raising the required volume of funds in the interbank loans market, including SWAP trades;
- foreign currency purchase/sale trades in the required volumes;
- reduction of securities portfolios and performance of REPO transactions;
- use of CBR loans;
- setting payments priority.

NCC's prospective liquidity is regularly analyzed and evaluated by Risk Department and includes:

- analyzing prospective liquidity across all time horizons using the GAP-analysis, including forecast of cash flows according to the actual timelines for assets' sale, settlement and enforcement of obligations;
- determining of NCC's reasonable liquidity needs, including calculation of liquidity excess/shortage;
- analyzing prospective liquidity using the liquidity excess/shortage ratios;
- analyzing the structure and concentration of NCC's assets and liabilities, status of claims (especially overdue claims) and obligations (especially when there is a risk of early demand for repayment);

The prospective liquidity risk is assessed and monitored with respect to all major currencies in which NCC performs transactions.

All settlement banks are subject to regular assessment of their financial conditions aimed to identify the signals of potential insolvency. Only the most reliable banks can be chosen as settlement banks.

In addition, NCC monitors concentration risk on a permanent basis. If a certain concentration level is exceeded, the excess liquidity not used in settlements is transferred to other banks.

Furthermore, NCC aims at diversifying its correspondent network by engaging banks which could potentially perform settlement bank functions.

NCC determines the liquidity shortfall to be covered in case of the largest defaults and uses this estimate when choosing liquidity suppliers. The current list of liquidity suppliers is monitored and assessed on a quarterly basis.

Key consideration 4:

If an FMI conducts money settlements on its own books, it should minimise and strictly control its credit and liquidity risks.

NCC does not conduct clearing settlements on its own.

Key consideration 5:

An FMI's legal agreements with any settlement banks should state clearly when transfers on the books of individual settlement banks are expected to occur, that transfers are to be final when effected, and that funds received should be transferable as soon as possible, at a minimum by the end of the day and ideally intraday, in order to enable the

FMI and its participants to manage credit and liquidity risks.

Correspondent account agreements with settlement banks (or account terms and conditions – in case of non-resident banks) stipulate that cash withdrawals/credits from/to the correspondent account shall be made no later than on the “current business day” value date, and that the transfers are final when effected, and also that the bank may dispose of the cash on its correspondent account once it is credited to such account.

Settlements on correspondent accounts are conducted throughout the entire operation day of the relevant correspondent bank.

Final conclusion on the Principle 9

NCC conducts settlements by means of the payment system of CBR (in RUB), the payment system of NSD (in RUB and foreign currencies), and via commercial settlement banks (in foreign currencies). To mitigate credit and liquidity risks, NCC selects for settlements the most reliable counterparties; such selection includes credit rating, credit quality and operational reliability requirements. NCC monitors and controls concentration of funds on the correspondent accounts.

NCC does not conduct clearing settlements on its own.

PRINCIPLE 10: PHYSICAL DELIVERIES

An FMI should clearly state its obligations with respect to the delivery of physical instruments or commodities and should identify, monitor, and manage the risks associated with such physical deliveries.

Key consideration 1:

An FMI's rules should clearly state its obligations with respect to the delivery of physical instruments or commodities.

NCC accepts bonds, equities, foreign currencies, precious metals, commodities and GS-pooling instruments for physical delivery.

NCC defines its obligations based upon the results of trade obligations netting. The netting procedure is defined in Clearing Rules for the respective market.

NCC furnishes CMs with reports on the calculated total net obligations / net claims.

Clearing Rules and other documents describing NCC's responsibilities including quality of physically delivered instruments are publicly available at NCC's website (e.g, «Good delivery» precious metals bars etc.).

This information is part of Clearing Rules for the respective market. Moreover, reports and instruments' quality information is provided within the clearing system.

Key consideration 2:

An FMI should identify, monitor, and manage the risks and costs associated with the storage and delivery of physical instruments or commodities.

For securities, the costs associated with storage and delivery of physical instruments or commodities can be treated the costs of keeping the clearing depo accounts in the settlement depository;

Costs for precious metals:

1) NCC pays to the depository operator for precious metal bars safekeeping under the safekeeping agreement;

2) NCC pays for the balances of precious metals on the numbered metal correspondent accounts open by NCC with the non-resident correspondent bank under the numbered metal correspondent account agreement.

3) The local central depository - NSD performs the storage and settlement of securities both in paper and electronic forms. NCC pays NSD in accordance with the tariffs agreed. The risks arising in such case are negligible as NSD also belongs to the Moscow Exchange group.

Control of proper charging is done in accordance with the rates of the settlement depository and the precious metals depository.

Precious metal bars that belong to NCC, stored and/or transported by a specialized organization, are insured by Russian insurance companies and reinsured with the international reinsurer with a rating of at least A+, assigned by at least two of the three international rating agencies on the terms enabling direct payment of insurance compensation by the reinsurer of NCC.

All of the respondent's operations related to provision or withdrawal of precious metal bars under the numbered metal correspondent account agreement are subject to mandatory preliminary approval of NCC; moreover, pursuant to the provisions of the numbered metal correspondent account agreement, NCC has no obligation to return precious metals to the respondent in physical form.

NCC does not match CMs for delivery and settlement.

The legal obligations related to delivery are stated in the Clearing Rules for the

respective market.

The delivery procedures are discussed during users' committees meetings.

Costs for commodities imply the storage costs under the storage agreements and costs of grain silo insurance.

GC-Pooling instruments implemented by NCC in February 2016 also allow NCC and clearing members to manage the risk of non-delivery as assets securitized in GC-Pooling can also be used to meet the obligations of physical delivery and can be replaced within the pool without the termination of a contract.

Final conclusion on the Principle 10.

NCC determines its obligations related to physical delivery of instruments or goods, and also controls and manages the risks associated with physical delivery.

PRINCIPLE 11 CENTRAL SECURITIES DEPOSITORIES

Not applicable to NCC.

PRINCIPLE 12: EXCHANGE-OF-VALUE SETTLEMENT SYSTEMS

If an FMI settles trades that involve the settlement of two linked obligations (for example, securities or foreign exchange trades), it should eliminate principal risk by conditioning the final settlement of one obligation upon the final settlement of the other.

Key consideration 1:

An FMI that is an exchange-of-value settlement system should eliminate principal risk by ensuring that the final settlement of one obligation occurs if and only if the final settlement of the linked obligation also occurs, regardless of whether the FMI settles on a gross or net basis and when finality occurs.

Principal risk towards CMs can occur in

securities, foreign exchange and precious metals trades. It is eliminated through settlements on DvP terms or preliminary delivery by CMs.

The procedures for securing this mechanism are specified in NCC Clearing Rules:

- NCC determines net obligations of CMs to deliver/settle in every relevant security, currency or precious metal for each date.
- At the settlement time (also specified in Clearing Rules for each asset that is exchanged via NCC) NCC checks whether CM fulfilled its settlement or delivery obligation. Delivery and settlement are both performed using the same accounts that are used to pledge collateral. Therefore NCC always has access to information about balances on these accounts.
- If the whole amount of obligation is fulfilled by CM, NCC also fulfills the related obligation towards CM. If the obligation is partially fulfilled, NCC also fulfills related obligation in part.
- Unfulfilled portion of obligation is rolled over to next settlement day via repo or swap trade with non-delivering CM.
- If it's not possible to roll over the obligation (for example, in case of consecutive non-delivery for 4 days in the same security, or 2 days in cash), the position is closed out and the obligation is terminated.

These procedures ensure that the final settlement of one obligation occurs if and only if the final settlement of a linked obligation also occurs.

Linked obligations are settled on a net basis.

Trades in foreign currencies, precious metals and securities are settled on DvP terms. Therefore, the finality of

settlements for foreign currencies, precious metals, securities and cash is simultaneous.

The assets used for clearing and recorded on trading and clearing accounts are protected from third-party claims until clearing settlements are completed.

NCC independently controls compliance with the DvP principle.

Final conclusion on the Principle 12

Principal risk is eliminated through settlements on DvP terms.

PRINCIPLE 13: PARTICIPANT-DEFAULT RULES AND PROCEDURES

An FMI should have effective and clearly defined rules and procedures to manage a participant default. These rules and procedures should be designed to ensure that the FMI can take timely action to contain losses and liquidity pressures and continue to meet its obligations.

Key consideration 1:

An FMI should have default rules and procedures that enable the FMI to continue to meet its obligations in the event of a participant default and that address the replenishment of resources following a default.

NCC's rules and procedures stipulate grounds for NCC to announce an operational or technical default of a CM and provide for the actions to be taken should NCC declares a CM's default.

The cases of operational default comprise CM's fail to perform its trade obligations in full and on time as well CM's failure to pay the margin call in full and on time.

The cases of financial default comprise:

- withdrawal (revocation) of the banking license issued to CM-credit institution by CBR. The fact of withdrawal (revocation) of the license is confirmed with a written notice of CBR submitted to NCC and/or information on such decision published at the website of CBR;
- appointment of temporary administration or arbitration court's decision to introduce one of the bankruptcy procedures against a CM-non-credit institution.
- withdrawal (revocation) of a special permit (a license or other document) issued by the competent authority of the registration country of the non-resident bank, whereunder the non-resident bank is authorized to conduct banking operations stipulated by the domicile law of the non-resident bank.

The actions taken in case NCC announces CM's default include:

- termination of all trades executed by CM, whose default has been declared by NCC;
- hedging the risks arising in case of termination of all trades executed by CM, whose default has been declared by NCC;
- holding an auction among other CMs to eliminate the risk arising in case of termination of all the trades executed by CM, whose default has been declared by NCC.

The way NCC addresses a CM's default:

Operational default:

- the performance of obligations is deferred to the next settlement day by executing SWAP or REPO trades;
- if deferral is not possible, "closing" trades are operated or obligations

- are terminated (cash settlement);
- collateral is sold;
- defaulting CM contributions to Guarantee funds are used.

Financial default:

Termination of clearing services, termination of trade obligations on the date of clearing services' termination, and liquidation netting.

When an operational default occurs, the actions are taken automatically.

When a financial default occurs NCC acts in accordance with Clearing Rules and internal procedures. Financial default management procedures assume that termination of obligations and calculation of the net obligation / net claim in the course of liquidation netting is performed on the date following the date of license revocation / decision on triggering the bankruptcy procedure.

Operational default management procedures assume the use of NCC's own funds to perform obligations to the non-defaulting CMs; execution of REPO or SWAP trades with cash suppliers. In FX market CBR acts as cash supplier.

When a financial default occurs NCC may take measures contemplated in its Recovery and Resolution Plan.

NCC maintains permanent readiness of all of its available extra liquidity instruments (see Principle 7). Furthermore, NCC may ask non-defaulting CMs to replenish their Guarantee fund contributions (see Principle 4).

The procedure for use of resources in case of a CM's default is defined in the Clearing Rules and is also described in Principle 4.

The procedures set in Clearing Rules

state that NCC's Supervisory Board may take the decision to dedicate additional SiG that could be used to cover loss if NCC SiG dedicated for this market is insufficient. Additional SiG is used after SiG, but before non-defaulting clearing members' contributions to the Guarantee fund.

The procedures set in Clearing Rules stipulate that, once the non-defaulting CMs' contributions are used, NCC notifies CMs that the funds have been used and require replenishment.

Key consideration 2:

An FMI should be well prepared to implement its default rules and procedures, including any appropriate discretionary procedures provided for in its rules.

NCC has developed internal regulations governing the cross-division interaction in the event of a default.

NCC informs CBR on a regular basis on suspension/termination of admission to clearing services, technical defaults and performance of liquidation netting, on the use of NCC's financial resources to cover losses arising from a CM's default.

The internal roadmaps are subject to annual review and update.

Key consideration 3:

An FMI should publicly disclose key aspects of its default rules and procedures.

Clearing Rules which stipulate the order of default management procedures are registered by CBR and must be disclosed at least 5 days prior to their effective date.

a)

1) margin is called when existing

collateral is insufficient;

2) such procedures as forced closure of positions and enforcement of collateral are conducted when margin call or outstanding debt is not paid-off;

3) when individual clearing collateral is insufficient to repay the defaulter's debt or fulfil its margin call, then its contribution to the Guarantee fund is used. If its contribution to the Guarantee fund is insufficient, then NCC's dedicated capital (Skin-in-the-game) is used. After the non-defaulting CMs' contribution to the Guarantee fund is used.

4) when an unsatisfactory financial condition of CM is revealed as contemplated by the Clearing Rules, NCC may transfer positions of segregated clients;

5) when the bankruptcy procedures are initiated against CM or if its banking license is revoked liquidation netting procedure is applied and position of segregated client may be transferred.

6) cross-default procedure is implemented and defines the sequence of defaulting CM's guarantee funds and other resources usage and replenishment in order to cover CM's default at the respective market.

b) default management procedures are conducted by NCC's units in charge.

c) the scope of actions applicable when a margin call or debt depends on the type of account used to record the non-performed obligations - proprietary or client. First, the close out is conducted in respect of the positions recorded in the registers where the debt arose. Then NCC uses positions and collateral recorded in other registers of the same CM, except for the clients' collateral, incl.

segregated clients' collateral, if no non-performance event has been recorded in those.

The collateral at clients' registers is not used to cover own (CM's) or another client's losses.

The position deferral procedures employ segregated clients' positions and collateral only. Clearing Rules enable the transfer of collateral and obligations of segregated clients from CM in pre-default condition to another CM.

In case of liquidation netting, all positions are used, but in case of clients' positions there is a separate calculation of net obligation for each segregated client and trustees' codes. Furthermore, the transfer of segregated clients' positions is possible.

d) in case of CM's default, NCC executes balancing trades with non-defaulting CM, similar to the trades which NCC executed with the defaulter.

e) there are no direct relationships between the CMs' clients.

Key consideration 4:

An FMI should involve its participants and other stakeholders in the testing and review of the FMI's default procedures, including any close-out procedures. Such testing and review should be conducted at least annually or following material changes to the rules and procedures to ensure that they are practical and effective.

NCC does not involve CMs in the testing and review of NCC's default procedures. NCC's internal divisions carry out the tests and revision themselves.

Final conclusion on the Principle 13

NCC has clear rules and procedures in

place to respond to a CM's default, aiming to ensure NCC's timely performance of its obligations to the non-defaulting CMs and to limit NCC's losses. NCC makes available Clearing Rules containing the description of NCC's actions in case of a CM's default.

The recommendations are the following:

The frequency of testing of the default management procedures has to be formalized. NCC is aimed at addressing this discrepancy in the near future. Furthermore, NCC shall involve CMs in the process of default procedures' testing and review.

PRINCIPLE 14: SEGREGATION AND PORTABILITY

A CCP should have rules and procedures that enable the segregation and portability of positions of a participant's customers and the collateral provided to the CCP with respect to those positions.

Key consideration 1:

A CCP should, at a minimum, have segregation and portability arrangements that effectively protect a participant's customers' positions and related collateral from the default or insolvency of that participant. If the CCP additionally offers protection of such customer positions and collateral against the concurrent default of the participant and a fellow customer, the CCP should take steps to ensure that such protection is effective.

Clearing Rules of all markets require CMs to keep mandatory separate cash accounting for CMs and the cash of their clients, and, upon request of CM, there is an option of segregated accounting of obligations and collateral of CM's client

(hereinafter - the segregated client). CM may ask NCC to count client's (that is a CM) funds separately, so these funds cannot be used to cover.

Clearing Rules define the cases and the procedure for the transfer of collateral and obligations of segregated clients from CM, who may be declared to be in default, to another CM.

A CM may register its segregated client with NCC. In the cases stipulated by Clearing Rules, upon request of the segregated client, NCC transfers the debt and assigns the claims of CM on obligations under the trades executed at the expense of such segregated client, and also transfers the property registered as collateral for performance of such obligations to another CM nominated by such segregated client.

Without using the segregation arrangements, clients' assets are protected through the internal separate accounting arrangements only. NCC evaluates the extent to which the legal framework protects clients' assets.

Nevertheless, presently NCC uses segregation arrangements across all markets.

In case of an operational default of a CM, the clients' assets recorded under separate settlement codes will not be used to perform obligations of CM recorded under other settlement codes. Settlement code may be opened for a CM's client that is not registered as segregated client and cannot use the procedure of obligations' transfer, however such CM's client's funds are safeguarded.

Before occurrence a CM's financial default occurs, segregated clients may

use the procedure of transfer of obligations and transfer of collateral in the cases and in accordance with the procedure stipulated in Clearing Rules. Financial default (license revocation / bankruptcy) occurrence is also the ground for segregated clients' obligations and collateral transfer.

Another client's default will not affect the funds of the segregated client.

The provisions regulating the transfer of positions and collateral are also contained in Clearing Rules, which must be reconciled with the Legal Department and registered by CBR.

NCC aims at implementing the norms and procedures of the best foreign practices related to segregation and transfer of positions, including EMIR. NCC has carried out legal expertise that determined compliance of NCC with best international practices, viz. EMIR.

Key consideration 2:

A CCP should employ an account structure that enables it readily to identify positions of a participant's customers and to segregate related collateral. A CCP should maintain customer positions and collateral in individual customer accounts or in omnibus customer accounts.

Clearing Rules require mandatory separate accounting of CM's own funds and the clients' funds (on the omnibus account).

CM may demand that NCC registers segregated client, thus separated record keeping of this client's funds will be performed and the client will have the right to transfer its obligations / collateral to another Clearing member.

The segregation procedure implemented

by NCC meets the requirements of the Federal Law "On Clearing and Clearing Activities".

Standardized OTC Derivatives market:

NCC uses segregated and unsegregated clearing registers (cash collateral registers and position accounting registers) to record the clients' positions and collateral.

The segregated clearing registers have the account structure of the "individual" type – only one segregated position accounting register may match the segregated cash collateral register.

The unsegregated clearing registers have the account structure of the "omnibus" type – one or several unsegregated position accounting registers may match the unsegregated cash collateral register.

The collateral recorded in the cash collateral register covers all trade obligations recorded in the position accounting registers corresponding to this cash collateral register.

NCC does not rely on CM's records containing the sub-accounting for individual clients; instead, it conducts its own accounting for CM's clients in cash collateral registers and position accounting registers.

The volume of collateral on the positions recorded in the position accounting registers corresponding to one cash collateral register is calculated on a net basis.

The segregated client's positions and collateral may be transferred from one CM to another prior to announcement of default of CM. After CM is declared to be in financial default, NCC may use CM's collateral; client's collateral is used to

calculate net obligations for client's codes.

The collateral of a specific client is used within liquidation netting procedure of CM's client (in case of its bankruptcy or license revocation).

Collateral covers initial margin requirements.

NCC relies on information about asset balances on accounts and on crediting of assets to NCC's accounts, which it receives from the Settlement Depository, Settlement Organization and Settlement Banks.

The collateral for the clients' positions in the FX market and Securities market is calculated with breakdown by accounts opened by CMs to record the clients' positions and funds: omnibus or individual ones.

In the Derivatives market, collateral is calculated for CM in total, according to the "long leg" principle.

If collateral is recorded on the omnibus account, then one client's collateral is exposed to "fellow customer risk".

If collateral is recorded on the client's individual account, then it is not exposed to "fellow customer risks", including the risk of bankruptcy of CM (in line with latest Russian legislation changes).

Key consideration 3:

A CCP should structure its portability arrangements in a way that makes it highly likely that the positions and collateral of a defaulting participant's customers will be transferred to one or more other participants.

Segregation and portability arrangements are indicated in Clearing Rules. The rules stipulate the grounds for

positions transfer, the procedure and timeline for such transfer. CMs must act in accordance with Clearing Rules.

Clearing Rules contemplate fulfillment of the following conditions:

- the ground for transfer, as established by NCC;
- receipt of an application for transfer from the segregated client, indicating CM to whom the transfer is made; and
- consent of CM to whom the transfer is made.

The orders for collateral transfer are generated by NCC, and collateral accounts are under control of NCC and are protected against third-party claims till completion of clearing settlements on the date when such claims are presented.

The transfer of the segregated client's positions and collateral by changing the accounting of positions and collateral in the clearing registers. The transfer is conducted in full; partial transfer of positions and collateral is not allowed.

The procedure for obligations and collateral transfer, and the procedure for obtaining consent thereto are described in Clearing Rules for all the markets.

By signing the clearing agreement, CMs accede to Clearing Rules which stipulate the right of segregated clients to submit application for transfer of positions in case of a CM's default. NCC registers a segregated client (the Segregated Brokerage Firm in case of the Derivatives market), which constitutes consent of the Main CM to the transfer of obligations and collateral of such client upon its application submitted to NCC in the cases stipulated in Clearing Rules.

In case of the events set forth by Clearing

Rules, the Segregated Client (Authorized Account Owner in Derivatives market) submits to NCC an application for obligations and collateral transfer. Such application may be filed in advance, prior to the relevant events within the procedure indicated in the Clearing rules.

Then NCC submits to the recipient CM indicated by the Segregated Client in its application for transfer of obligations and collateral the information about such Segregated Client's obligations and collateral, and the recipient CM is entitled to give NCC its consent to accept the obligations/claims of the Main CM. NCC performs the transfer of obligations and collateral of the Segregated Client from the Main CM to the recipient CM upon receipt of consent of the recipient CM only.

Key consideration 4:

A CCP should disclose its rules, policies, and procedures relating to the segregation and portability of a participant's customers' positions and related collateral. In particular, the CCP should disclose whether customer collateral is protected on an individual or omnibus basis. In addition, a CCP should disclose any constraints, such as legal or operational constraints, that may impair its ability to segregate or port a participant's customers' positions and related collateral.

The segregation and portability arrangements are stipulated in Clearing Rules, which are subject to mandatory disclosure at NCC's website. Clearing Rules state whether collateral is protected on an individual or omnibus basis.

NCC discloses information about operational procedures, requirements

and costs associated with the segregation and portability arrangements in Clearing Rules. There are no legal constraints, except those which are stipulated in Clearing Rules.

Final conclusion on the Principle 14

NCC provides the degree of segregation stipulated by the Russian legislation as well as international best practices, including the possibility to segregate the clients' collateral and positions both on the basis of the omnibus accounting principle and on an individual basis. NCC's procedures, and, in particular, its liquidation netting procedure, enable the transfer of positions of CM's client to another CM in case of CM's default.

PRINCIPLE 15: GENERAL BUSINESS RISK

An FMI should identify, monitor, and manage its general business risk and hold sufficient liquid net assets funded by equity to cover potential general business losses so that it can continue operations and services as a going concern if those losses materialize. Further, liquid net assets should at all times be sufficient to ensure a recovery or orderly wind-down of critical operations and services.

Key consideration 1:

An FMI should have robust management and control systems to identify, monitor, and manage general business risks, including losses from poor execution of business strategy, negative cash flows, or unexpected and excessively large operating expenses.

NCC identifies general business risks by analyzing revenues and expenses arising from conducting its services. NCC has identified general business risks arising from unprofitable services and launch of unnecessary projects.

To monitor and mitigate general business risk, NCC takes the following actions:

- NCC adheres to the Moscow Exchange Group's strategy, developed with participation of the Commission for Strategic Planning by the Supervisory Board of Moscow Exchange;
- Implementation of new projects involves analyzing revenues and expenditures; a group-wide business planning, control and analysis is conducted weekly.
- capital forecasting and cash flow analysis is undertaken and presented to the Management at least on a quarterly basis to consider the

potential effects of arising business risks.

Key consideration 2:

An FMI should hold liquid net assets funded by equity (such as common stock, disclosed reserves, or other retained earnings) so that it can continue operations and services as a going concern if it incurs general business losses. The amount of liquid net assets funded by equity an FMI should hold should be determined by its general business risk profile and the length of time required to achieve a recovery or orderly wind-down, as appropriate, of its critical operations and services if such action is taken.

NCC has dedicated 25% of its annual operational expenses from capital to account for general business risk in accordance with CBR's regulation based on the CPMI-IOSCO PFMI.

The calculation procedures are indicated in CBR's regulation. The length of time and associated operating costs of achieving a recovery or orderly wind-down of critical operations and services is determined in compliance with CPMI-IOSCO PFMI and is set as 6 months.

Key consideration 3:

An FMI should maintain a viable recovery or orderly wind-down plan and should hold sufficient liquid net assets funded by equity to implement this plan. At a minimum, an FMI should hold liquid net assets funded by equity equal to at least six months of current operating expenses. These assets are in addition to resources held to cover participant defaults or other risks covered under the financial resources principles. However, equity held under international risk-based capital standards can be included

where relevant and appropriate to avoid duplicate capital requirements.

NCC has developed and implemented a financial recovery plan. It does not imply that NCC's operations shall move to another entity; instead, it mainly focuses on restoring NCC's financial stability and recovering its functions. Therefore, such plan does not set any requirements for CMs as to move to an alternative arrangement.

It is worth stressing that the plan has been developed in accordance with CBR's recommendations.

NCC has dedicated capital funds amounting to 50% of its annual operational expenses for orderly wind-down.

NCC's dedicated CCP capital (Skin-in-the-game), funds to cover general business risk and orderly wind-down are all segregated on different capital accounts in accordance with CBR legislation.

NCC is doing its best to comply with international standards, which are being implemented by CBR's regulation. According to the regulation NCC segregates its dedicated CCP capital (Skin-in-the-game), funds to cover general business risk and orderly wind-down from capital required to cover all other risks under a regulatory approach. Furthermore, NCC regularly assesses additional capital required to cover stress losses.

Key consideration 4:

Assets held to cover general business risk should be of high quality and sufficiently liquid in order to allow the FMI to meet its current and projected operating expenses under a range of scenarios, including in adverse market conditions.

NCC's assets are subject to strict liquidity and quality criteria stated in CBR's regulation and approved by the Supervisory Board, thus they can easily be converted into cash in adverse market conditions at little or no loss of value. They are mainly composed of correspondent accounts, sovereign and other CBR eligible bonds.

The quality and liquidity of NCC's assets is monitored at least on a monthly basis and scrutinized by CBR. Furthermore, NCC conducts liquidity, market risk and credit risk stress tests comprising various scenarios. For more information on NCC's stress tests see Principles 4, 7.

Key consideration 5:

An FMI should maintain a viable plan for raising additional equity should its equity fall close to or below the amount needed. This plan should be approved by the board of directors and updated regularly.

Plan to raise additional equity is an integral part of the Financial Recovery Plan. This plan is to be implemented if capital adequacy ratio moves close to the minimum requirements set by CBR. Main equity supplier is to be the sole shareholder, Moscow Exchange.

The plan to raise additional equity is updated within the process of reviewing the Financial Recovery Plan on an annual basis.

The Financial Recovery Plan is approved by the Supervisory Board. The issue of raising additional equity requires examination by the Supervisory Board.

The final decision on raising additional equity is made by the sole shareholder on the basis of the proposals submitted by the Supervisory Board.

Final conclusion on the Principle 15

NCC manages its general business risk adhering to the single strategy of Moscow Exchange, conducts business planning and analysis of revenues and expenditures.

NCC has developed the Financial Recovery Plan, which provides a range of measures and arrangements for their implementation to maintain continuity of NCC's functions as a credit organization and the CCP in case of material deterioration of NCC's financial standing and general market conditions.

NCC has also segregated sufficient capital funds to cover business risks and orderly wind-down in compliance with CBR's regulation and CPMI-IOSCO PFMI.

PRINCIPLE 16: CUSTODY AND INVESTMENT RISKS

An FMI should safeguard its own and its participants' assets and minimize the risk of loss on and delay in access to these assets. An FMI's investments should be in instruments with minimal credit, market, and liquidity risks.

Key consideration 1:

An FMI should hold its own and its participants' assets at supervised and regulated entities that have robust accounting practices, safekeeping procedures, and internal controls that fully protect these assets.

NCC selects its custodians using the following criteria set by the regulator:

- inclusion into the List of organizations where the Russian custodians may open accounts to keep record of their rights to foreign securities, for the purpose of issuance of the Russian depository receipts, approved by the Order of

- the Russian Federal Service on Financial Markets No. 11-35/pz-n;
- status of central depository in the country of origin;
- custodian/depository rating of at least "A+" according to the classification of the international rating company Thomas Murray;
- international rating of at least "B";
- being a member of a banking group (holding), which parent company has an international rating of at least "B";
- decisions of the custodian's management bodies may be directly and materially influenced by an organization with an international rating of at least "B";
- custodian has a status of a settlement depository under the Russian law;
- custodian is a specialized depository for investment funds, mutual funds and private pension funds, conducting depository activities for over 5 years on the basis of the relevant Russian Federal Service on Financial Markets license;
- the custodian has been conducting depository activities for over 5 years on the basis of the relevant Russian Federal Service on Financial Markets license, its equity equals at least 250 M RUB as of any of the two most recent reporting dates;
- custodian has opened a separate nominee depo account in the depository meeting one of the criteria listed in the previous paragraphs of this section, designed solely to keep record of NCC's securities, and included in the separate nominee depo account agreement with the depository the right of CBR to obtain information certifying NCC's rights to securities upon request sent to such depository.

Criteria compliance check is performed

while preparing the agreement with the custodian, and also as part of the quarterly counterparty risk assessment.

To conclude the agreement, the custodian is requested to provide the relevant documents.

Key consideration 2:

An FMI should have prompt access to its assets and the assets provided by participants, when required.

The possibility of enforcement is stipulated in the Federal Law dated February 7th, 2011 "On Clearing and Clearing Activities". The procedure for the enforcement of collateral of the defaulting CM is stipulated in the agreement between NCC and CM.

All assets, including the securities required for settlement, are kept on the clearing and trading accounts opened with a settlement organization (settlement depository) within the Russian jurisdiction. NCC has a right of disposal in respect of any/ all accounts used for settlement.

The cash in foreign currencies on NCC's correspondent accounts with non-resident settlement banks is accessed in a real-time mode throughout the counterparty's trading day.

Presently, NCC holds no assets with custodians located in other time zones.

Key consideration 3:

An FMI should evaluate and understand its exposures to its custodian banks, taking into account the full scope of its relationships with each.

Credit exposures are measured and monitored for all counterparties, including custodians, at least once per quarter. The main settlement depository

for securities is NSD, which has a status of the Russian central depository and is also part of the Moscow Exchange Group. To monitor concentration of risk exposures to its custodian and settlement banks NCC sets limits depending on the quality and financial conditions of the banks. These limits are monitored on an online basis and reviewed at least annually.

Key consideration 4:

An FMI's investment strategy should be consistent with its overall risk-management strategy and fully disclosed to its participants, and investments should be secured by, or be claims on, high-quality obligors. These investments should allow for quick liquidation with little, if any, adverse price effect.

NCC has developed a Treasury Policy (<http://nkcbank.ru/viewCatalog.do?menuKey=187>), which determines the major guidelines for NCC's investment strategy (hereinafter the "Treasury Policy"). The Treasury has been coordinated with NCC's Risk Department and approved by the Risk Committee of NCC's Supervisory Board. The major provisions of the Treasury Policy are disclosed on NCC's website.

Strict investment restrictions are posed on NCC's investments according to a special CBR Directive No. 2919-U "On Assessment of the Management Quality of a Credit Organization Performing the Functions of a CCP". Its criteria are replicated in NCC's Treasury Policy and only allow investments in government bonds, and other short-term financial instruments (correspondent accounts, bonds, deposits, REPO transactions) and entities of certain international rating grades closest to the sovereign level. To ensure this NCC sets limits depending on

the quality and financial conditions of its counterparties and issuers. These limits are monitored on an online basis and reviewed at least annually.

All counterparties and all investment transactions are subject to limits based on the assessment of the counterparty's financial condition and the way the investment transaction in question would affect capital adequacy. Furthermore, structural limits have been set, in particular the limits on the aggregate volume of corporate bonds and investments in the banking sector.

NCC allows investment (own funds and those of CMs) in securities / assets issued by CMs. At the same time, when analyzing counterparties' credit exposure NCC considers both their exposures as CMs and their exposures as counterparties/security issuers when allocating funds. Moreover, the overwhelming part of the portfolio (over 50%) is invested in Russian Sovereign bonds.

NCC invests cash only in highly liquid financial instruments, sets limits for the share of acquired securities in the total volume of issued securities, and conducts monitoring of the forecasted portfolio liquidation period. In a drastic lack of liquidity, the securities is eligible for CBR REPO facilities. Furthermore, the overall maturity of corporate bonds' portfolio is limited to 1.5 years, thus market risks, i.e. risks of negative revaluation of bond's prices, are mitigated.

Final conclusion on the Principle 16

NCC considers custodian risk as insignificant because NCC applies strict criteria and uses NSD as the main custodian. Investment Strategy is conservative as there is a number of

regulatory and internal limitations. NCC invests CMs money in highly liquid assets only and the major part of NCC's portfolio is Sovereign Russian bonds. NCC's Risk department and CBR monitor NCC's portfolio on a regular basis.

PRINCIPLE 17: OPERATIONAL RISK

An FMI should identify the plausible sources of operational risk, both internal and external, and mitigate their impact through the use of appropriate systems, policies, procedures, and controls. Systems should be designed to ensure a high degree of security and operational reliability and should have adequate, scalable capacity. Business continuity management should aim for timely recovery of operations and fulfilment of the FMI's obligations, including in the event of a wide-scale or major disruption.

Key consideration 1:

An FMI should establish a robust operational risk-management framework with appropriate systems, policies, procedures, and controls to identify, monitor, and manage operational risks.

NCC's operational risk-management is an integral part of Moscow Exchange's operational risk-management, thus Moscow Exchange has adopted the Operational Risk Management Policy describing the methodology for identifying possible sources of operational risks. This methodology has been developed taking into account the specifics of NCC's main business, viz. performance of the function of a clearing center and CCP, as well as NCC's treasury operations. The process of managing NCC's operational risk includes not only identifying an operational risk event, but

also analyzing its reasons and taking actions to mitigate the risk, followed by subsequent control of comprehensiveness and sufficiency of such actions.

NCC has identified the following major sources of operational risks:

- Suboptimal, insufficient or ineffective processes and procedures;
- inadequate personnel actions (due to fraud or mistake);
- system failures;
- adverse external events (including fraud and emergencies).

NCC has identified the following:

- Risk of malfunctions of the systems and equipment due to the absence of a joint (Moscow Exchange/ NCC/ NSD) full cycle testing and corresponding processes and procedures (current procedures do not fully meet the requirements set for testing significant modifications; and modification processes are not unified).
- Risk of malfunctions of the systems and equipment due to absence of joint (NCC and NSD) testing contour (the existing IT infrastructure does not fully enable full cycle testing within companies).

According to the provisions of the Operational Risk Management Policy and the Procedure for Monitoring Operational Risks, NCC conducts an ongoing monitoring of the Key Risk Indicators. The monitoring system includes:

- development and assessment of efficiency of the Key Risk Indicators;
- gathering information required for calculation of the Key Risk Indicators;
- calculation and control of current values of the Key Risk Indicators;

- prompt response if the Key Risk Indicators values reach critical level.

The reports on loss events and key risk indicators are submitted to the management bodies on a regular basis.

In respect of the already identified risks, NCC develops measures to mitigate such risks and regularly checks their implementation.

Operational risk events are collected in accordance with Loss Collection procedure, mitigation action plans are elaborated and being monitored on regular basis.

To ensure proper performance of operational procedures, NCC uses the following:

- Trading day regulations for clearing of the trades executed in different market segments;
- Control of performance of operational procedures with available means (checklists, processing incidents, service requests).
- The applicable systems, policies and processes are periodically checked for compliance with the following requirements: CBR's regulations, requirements of the international standard ISO 9001:2008, requirements of the group of standards ISO 31000).

In compliance with the Quality Management System implemented within NCC, the organization has established, and is properly adhering to, all requirements of the standard ISO 9001:2008 section 6.2 "Human Resources" as regards managing personnel, ensuring competencies and mitigating the risk of high personnel turnover.

Fraud prevention measures are taken as part of the Information Security Management System and include:

- data Leakage Prevention System;
- ranking data by degree of confidentiality and secrecy;
- separating the employees' rights of access to information and data.

To avoid negative effect of changes and large projects on uninterrupted functioning of the system, NCC creates an independent project office system operating within the entire Moscow Exchange and enables functioning of the Committee for Coordination of Technical Modifications.

Key consideration 2:

An FMI's board of directors should clearly define the roles and responsibilities for addressing operational risk and should endorse the FMI's operational risk-management framework. Systems, operational policies, procedures, and controls should be reviewed, audited, and tested periodically and after significant changes.

NCC's Supervisory Board supervises operational risk management: approves the structure of the operational risk management system, general guidelines for functioning of the main elements of this system, and the internal documents governing operational risk management.

According to the requirements of the Operational Risk Management Policy, the first competence level is represented by the Supervisory Board of NCC. The Supervisory Board holds meetings dedicated to operational risk issues on a quarterly basis and in accordance with the results of analysis of prepared data and information obtained during the reporting period, Supervisory Board is

authorized to make decisions, including the decisions to revise and approve the operational risk management structure. The Risk Committee of the Supervisory Board conducts operational risk management and meets on a regular basis.

NCC performs stress testing of its software and hardware at least once in 6 months. The systems are tested in case of any modifications, and stress testing covers the actions and recovery of the systems in emergencies. In a number of scenarios CMs are involved in such stress testing. In addition, there are regular volume tests of trading and clearing systems and the ability to switch from them to reserve equipment.

The annual mandatory audit of financial reporting also covers the issues related to operational risks. The annual audit of the quality management system also touches upon the issues of operational risk management both within the company as a whole and directly in the audited activities. The results of all audits are provided to the management bodies.

Key consideration 3:

An FMI should have clearly defined operational reliability objectives and should have policies in place that are designed to achieve those objectives.

NCC uses the following qualitative and quantitative operational reliability objectives:

- IT systems availability ratio, set as a consolidated figure for all the companies of Moscow Exchange and all technological systems, set as one of the group's KPIs.
- Quality objectives in accordance with the requirements of the international standard ISO 9001:2008.
- The Key Risk Indicators approved by

the top management of the organization.

The IT systems availability ratio is set as a consolidated figure for all the companies of Moscow Exchange and all technological systems. This ratio reflects the systems' reliability level to a significant extent. Maintaining this ratio on the prescribed level requires adequate and uninterrupted functioning of all systems, which is determined by the existing management system both in the field of IT infrastructure and within its supporting divisions. The required work and control efficiency indicators have been set for all company employees.

The following documents have been developed, approved and implemented in this organization:

1. Policies:

Operational Risk Management Policy of NCC.

2. Procedures:

- Procedure for Self-Assessment of Operational Risk in NCC;
- Loss collection procedure in NCC;
- Procedure for Monitoring Operational Risk in NCC;
- Business Continuity and Recovery Plan of NCC.

3. Methodologies:

- Methodologies for operational risk level assessment (by risk type);
- Methodologies for risk control indicators calculation;

4. Internal classification handbooks:

- Business Activities Handbook;
- Handbook of the Operational Losses Types;
- Handbook of the Operational Risk

- Types;
- Operational Risk Map.

Key consideration 4:

An FMI should ensure that it has scalable capacity adequate to handle increasing stress volumes and to achieve its service-level objectives.

The tests are carried out once per 6 months.

Based upon information about critical values of the systems' carrying capacity, discovered during operational risks monitoring, the management bodies take measures to eliminate the problem by updating the program codes, equipment renewal, installation of backup processes and hardware.

Key consideration 5:

An FMI should have comprehensive physical and information security policies that address all potential vulnerabilities and threats.

In accordance with the Russian law, NCC has set up a physical security system ensuring continuity of the existing management processes.

NCC and Moscow Exchange have comprehensive physical and information security protections, policies and procedures that identify and address potential vulnerabilities and threats. In relation to systems security, to ensure that NCC security practices and protocols are in line with industry standards, its network infrastructure and security protocols are subjected to periodic independent third party vulnerability assessment (penetration testing).

The Moscow Exchange security management maintains a high degree of collaboration and cooperation with local

and national law enforcement and intelligence agencies receiving timely intelligence briefings and threat assessments. System security standards are set and monitored at the Moscow Exchange Group level. A team of Moscow Exchange employees are dedicated to assessing, identifying, and remediating potential application security issues. These teams rely on internal processes, with the goal to ensure that vulnerabilities are not introduced that may jeopardize the confidentiality, integrity, or availability of internal systems.

NCC has carried out several documents regarding information security: Information Security Policy and Data Protection and Security Rules that defines general guidelines for managing changes. Furthermore, there is the Malware Protection Policy that describes the process of tracking external security threats. To avoid negative effect of changes and large projects NCC has an independent project office system operating within the Moscow Exchange Group and enables functioning of the Committee for Coordination of Technical Modifications.

NCC takes into account the following international standards: STO BR IBBS-1.0 and ISO 27001.

Key consideration 6:

An FMI should have a business continuity plan that addresses events posing a significant risk of disrupting operations, including events that could cause a wide-scale or major disruption. The plan should incorporate the use of a secondary site and should be designed to ensure that critical information technology (IT) systems can resume operations within two hours following

disruptive events. The plan should be designed to enable the FMI to complete settlement by the end of the day of the disruption, even in case of extreme circumstances. The FMI should regularly test these arrangements.

The approved business continuity policy describes the process of managing business continuity in the organization. The Business Continuity and Recovery Plan determines the procedure for recovering business processes (with a detailed action plan) in case of large-scale or global breakdowns.

As part of the Business Continuity Program, NCC develops plans of recovery of critical IT systems which also determine the duration of recovery. The majority of IT systems are recovered in less than 2 hours.

In case of any malfunctions in IT systems, there will be no data loss, as NCC uses many forms of data copying and storage. According to the relevant contingency plans there are constantly tested back-up systems ready to plug-in at different offices. All trading data is replicated in different storages (hot and cold systems). The trading activity, hardware and software functionality are monitored on an online basis.

The Business Continuity and Recovery Plan stipulates the procedure of communication in case of an emergency. Furthermore, NCC has developed an internal Regulation for actions of bank divisions in emergencies occurring during trading and clearing; it describes the procedure for informing clients and competent authorities during a crisis situation.

NCC has a secondary site. The requirements to a secondary site have

been developed and contain the description of technical characteristics of such secondary site (including geographic distance) and minimum required resources for recovery of critical processes. The secondary site is located at a sufficient geographic distance – in another district of the city.

The structural units' business continuity plans have a separate section dedicated to alternative process arrangements (for example, remote access), but in most cases the recovery of critical processes would require the recovery of IT systems.

The review and improvement of business continuity arrangements is contemplated by the Business Continuity Policy, just as the planning of annual testing, including the scenarios where primary site is inaccessible or the scenarios of large-scale breakdowns.

The testing of business continuity arrangements involves primary and secondary service providers (including correspondent banks). In addition, certain types of testing involve participation of the regulator and CMs.

Key consideration 7:

An FMI should identify, monitor, and manage the risks that key participants, other FMIs, and service and utility providers might pose to its operations. In addition, an FMI should identify, monitor, and manage the risks its operations might pose to other FMIs.

By now, the following operational risks associated with external factors have been identified:

- Loss or restriction of cooperation with external service providers;

At present, a list of key service providers has been developed, and for each category of such providers an action plan

was drawn up in case if the provider is inaccessible. This plan has been reviewed by the Risk Committee at the Supervisory Board of Moscow Exchange and the Commission for Technical Policy at the Supervisory Board of Moscow Exchange.

- Malfunctions in the operation of a telecommunication service provider;
- Breakdown of the primary site due to utility incidents;
- Breakdown of the primary Data Processing Centre due to utility incidents;
- Breach of NCC's information security.

To monitor and manage these risks:

- NCC has developed a plan to ensure functioning of NCC in case of realization of such risks, introduced a rule of storing the source code of the products under development inside NCC, and hired employees with required expertise;
- NCC has 4 independent telecommunication service providers;
- NCC has a secondary site and the business continuity program;
- NCC has a secondary Data Processing Centre and annually tests the latter;
- NCC has implemented the Information Security Management System (ISMS) and is implementing the standard ISO 27001.

NCC does not outsource critical services. Most outsourced services are conducted by the Moscow Exchange Group companies. The outsourcing agreement is supplemented with the Service Level Agreement provisions. The quality of delivered services is regularly monitored.

As part of the polls conducted by other Financial Market Infrastructures, NCC asks to report significant risks associated

with NCC operations. Once such risks are identified, they are handled in accordance with the Operational Risk Management Policy. By now, NCC has not received any information about such risks.

All interdependencies have been described in the Business Continuity and Recovery Plan; in case if NCC identifies any material dependence on third parties in critical processes, it analyzes such dependence and, if necessary, considers the possibility to seek for an alternative provider (if any) or to review the process in order to find an alternative solution. Considering the only possible interdependent FMI for NCC is part of the Moscow Exchange Group (NSD), its business continuity arrangements are coordinated on Group level.

Final conclusion on the Principle 17

NCC has functioning control systems, policies, procedures and tools enabling identification, assessment, control and management of operational risks. NCC identifies operational risks both by registering operational risk events and by conducting regular self-assessments. Operational risks levels are monitored using the Key Risk Indicators developed by NCC.

NCC has set high target criteria of operational business stability, and its systems ensure compliance with the set target levels. To ensure stability, including the same in case of increased transaction volumes, NCC regularly conducts load-testing of the IT systems.

Furthermore, NCC has developed policies and procedures to ensure physical and information security, aimed at ongoing elimination of the relevant risks.

To ensure continuity and recovery of business processes in case of large-scale or global breakdowns, NCC has developed the Business Continuity Policy and the Business Continuity Plan. Pursuant to the Business Continuity Policy NCC sets target recovery deadlines for IT systems, depending on how critical they are. At that, the majority of IT systems are recovered in less than 2 hours. The testing process involves primary and secondary service suppliers, and certain types of testing also involve the participation of the regulator.

PRINCIPLE 18: ACCESS AND PARTICIPATION REQUIREMENTS

An FMI should have objective, risk-based, and publicly disclosed criteria for participation, which permit fair and open access.

Key consideration 1:

An FMI should allow for fair and open access to its services, including by direct and, where relevant, indirect participants and other FMIs, based on reasonable risk-related participation requirements.

The following types of requirements are applied to CMs (the specific lists of requirements are stipulated in Clearing Rules for each market):

- requirements for the financial conditions of the CM;
- a signed agreements with NCC and other applicable service providers (e.g. NSD);
- contribution to the Guarantee fund;
- a banking license (for banks);
- a set of legal documents confirming the legal capacity and reliability of the CM;
- compliance with technical requirements.

Clearing Rules stipulate, inter alia, the following requirements for financial stability:

- CM's activities shall not give grounds for bankruptcy prevention measures in accordance with the laws of the Russian Federation on insolvency (bankruptcy) or in accordance with the personal law of CM;
- credit institutions and non-resident banks shall comply with mandatory indicators set by CBR, adopted for credit institutions, or mandatory indicators adopted by the competent body of the country of registration of the non-resident bank (if such mandatory indicators must be adopted in accordance with the national legislation of the country of registration of the non-resident bank);
- the activities of CMs - credit institutions shall give no grounds for revocation by CBR of their banking license in accordance with the banking laws of the Russian Federation;
- the activities of CMs - non-resident banks shall give no grounds for revocation of their banking license in accordance with the personal law of the non-resident bank;
- credit institutions shall have in their balance sheet a positive current-year financial result as of the most recent reporting date;
- state corporations, international organizations, non-credit organizations shall have in their balance sheet a positive financial performance result as of the most recent reporting date, determined as profit after taxation; and
- non-residents shall have in their financial reports as of the most recent reporting date a positive financial performance result determined as profit after taxation.

A fair and open access to NCC's services is based on the fact that these criteria and requirements are the same and apply to all CMs belonging to the same category.

Key consideration 2:

An FMI's participation requirements should be justified in terms of the safety and efficiency of the FMI and the markets it serves, be tailored to and commensurate with the FMI's specific risks, and be publicly disclosed. Subject to maintaining acceptable risk control standards, an FMI should endeavour to set requirements that have the least-restrictive impact on access that circumstances permit.

NCC's clearing membership requirements are designed to address risks that must be managed by a CCP to ensure the safety and efficiency of the markets. Many of the clearing membership requirements reinforce regulatory requirements that are directly binding on CMs. For example, the requirements that CMs must maintain reliable financial condition and rigorous anti-money-laundering procedures reflect the public policy purpose of regulatory requirements for financial intermediaries to reduce systemic risk and protect clients. NCC's reinforcement of certain of those requirements is designed to reduce the risk in its clearing arrangements, and thereby to reinforce the safety of the markets served. Additional clearing membership requirements apply to make NCC a secure and safe CCP.

Neither laws, nor regulations stipulate the requirements for admission to clearing services.

The Clearing Law requires CMs to inform their clients about their rights for

segregation, accounting rules and tariffs.

The CMs belonging to the same category are subject to the same access criteria. For instance, execution of client trades requires presenting the relevant license that enables providing such services (a broker license or a securities management license). Banking institutions and non-bank organizations are subject to financial stability requirements.

There are variations in requirements for different types of CMs (banks, financial companies and non-residents), stemming from regulatory specifics and peculiarities of their particular business (for example, there are variations in composition of the requested reporting).

Access restrictions and requirements are unified for all the markets. The requirements are revised in case of introduction of new products or changes in regulatory requirements. In addition, the requirements are revised in case of changes in procedures and access schemes in line with Clearing Rules.

The participation criteria, including restrictions in participation, are regulated by Clearing Rules, which are publicly available at NCC's official website.

Key consideration 3:

An FMI should monitor compliance with its participation requirements on an ongoing basis and have clearly defined and publicly disclosed procedures for facilitating the suspension and orderly exit of a participant that breaches, or no longer meets, the participation requirements.

NCC monitors its CMs' ongoing compliance with the access criteria via automated reports on monitoring of

financial and non-financial information on the daily, monthly and quarterly basis, using data analysis resources and internal specialized software platforms.

CMs with deteriorating risk profile are recorded in the internal observation history database, using the results of financial analysis (identification of the major markers of financial indicators dynamics), internal information (from NCC's divisions) and public information made available in the information and analytical resources and mass media.

In accordance with Clearing Rules, NCC may restrict services to CM violating or incompliant with the established requirements, to the point of complete termination of clearing services. The grounds for such measures may include, in particular, default on obligations, revocation of the license, violation of mandatory performance indicators, losses, and other deterioration of the financial condition. The procedures and order for interaction between NCC's units are determined in its internal documents.

The participation criteria, including restrictions in participation, are regulated by Clearing Rules, which are publicly available at NCC's official website.

Final conclusion on the Principle 18

NCC guarantees access to clearing services provided that CMs comply with the access criteria, which are the same for all the markets. CMs that belong to the same category are subject to the same access criteria. There are variations in requirements for different types of CMs (banks, financial companies and non-residents), stemming from regulatory specifics and peculiarities of their particular business (for example, there are reporting variations). NCC exercises

an ongoing control of CMs' compliance with access criteria.

PRINCIPLE 19: TIERED PARTICIPATION ARRANGEMENTS

An FMI should identify, monitor, and manage the material risks to the FMI arising from tiered participation arrangements.

Key consideration 1:

An FMI should ensure that its rules, procedures, and agreements allow it to gather basic information about indirect participation in order to identify, monitor, and manage any material risks to the FMI arising from such tiered participation arrangements.

NCC does not use any tiered participation arrangements; at that, NCC offers both direct participation in a role of CM and indirect participation in a role of CM's client.

Clearing Rules stipulate necessary requirements for the direct participation in a role of CM.

In case of the indirect participation as CM's client, such client is registered on the basis of the information provided by CM. The requirements for information provided for a client's registration are set by CBR. In case of any changes in the information for client's registration, CM shall provide such amended information.

Trades may be executed in the interests and at the expense of CM or in the interests and at the expense of CM's client. At that, CM is counterparty for obligations under all trades.

NCC evaluates risks for the trades recorded in the position accounting registers which correspond to the same cash collateral register, on the basis of

the collateral recorded in this cash collateral register. Risks are evaluated in the same manner for own cash collateral registers of CM and for the client cash collateral registers. Given the unified risk evaluation approach, tiered participation arrangements do not generate any material risks for NCC.

Under the principal-to-principal contractual structure established in Clearing Rules, a CM is responsible for the financial servicing of all contracts registered in their client accounts. As a result, whilst NCC does not have a direct relationship with clients, these 'indirect participants' may pose a risk to NCC if they experience extreme losses, large enough to cause distress to a direct participant CM.

Key consideration 2:

An FMI should identify material dependencies between direct and indirect participants that might affect the FMI.

NCC evaluates interdependency risks in accordance with its internal criteria.

NCC conducts monthly monitoring of the reporting and other information about CMs' interdependencies. This is only applicable to CMs and collateral related wrong-way risk as there is no tiered participation.

Key consideration 3:

An FMI should identify indirect participants responsible for a significant proportion of trades processed by the FMI and indirect participants whose trade volumes or values are large relative to the capacity of the direct participants through which they access the FMI in order to manage the risks arising from these trades.

NCC does not use any tiered participation arrangements.

Key consideration 4:

An FMI should regularly review risks arising from tiered participation arrangements and should take mitigating action when appropriate.

NCC monitors positions of CMs and their clients; position coverage is checked at least once a day. The grounds for taking risk mitigation measures are: actual volatility is higher than calculated volatility, market crisis characterized by the deteriorating financial condition of a significant share of CMs.

Final conclusion on the Principle 19

NCC does not use any tiered participation arrangements. NCC offers both direct participation (CM) and indirect participation (CM’s client). Clearing Rules set the requirements for such participation and contain procedures for evaluation and control of the risks which may arise for NCC. NCC does not have to analyze the risks of CMs’ clients as CMs are in charge of them due to the clearing model that NCC currently operates.

Principle 19 is not applicable to NCC.

PRINCIPLE 20: FMI LINKS

An FMI that establishes a link with one or more FMIs should identify, monitor, and manage link-related risks.

Key consideration 1:

Before entering into a link arrangement and on an ongoing basis once the link is established, an FMI should identify, monitor, and manage all potential sources of risk arising from the link arrangement. Link arrangements should be designed such that each FMI is able to

observe the other principles in this report.

NCC interacts with NSD, which conducts clearing settlements and central depository services on the basis of local legislation and agreements.

Key consideration 2:

A link should have a well-founded legal basis, in all relevant jurisdictions, that supports its design and provides adequate protection to the FMIs involved in the link.

NCC has established links within the Russian jurisdiction.

Interaction with NSD takes place on the basis of the Interaction Agreement.

The interaction agreements contemplate the liability of the parties for improper performance of their obligations under the agreement.

Key considerations 3-9 are not applicable to NCC.

Final conclusion on the Principle 20

NCC interacts with NSD, which conducts clearing settlements in securities and cash on the basis of the relevant agreements.

PRINCIPLE 21: EFFICIENCY AND EFFECTIVENESS

An FMI should be efficient and effective in meeting the requirements of its participants and the markets it serves.

Key consideration 1:

An FMI should be designed to meet the needs of its participants and the markets it serves, in particular, with regard to choice of a clearing and settlement arrangement; operating structure; scope of products cleared, settled, or recorded; and use of technology and procedures.

CMs' needs are discussed at the users' committees, which consist of the market participants. Moscow Exchange has established a number of specialized users' committees, in particular:

- Committees for various markets;
- Committee for settlements and registration of operations;
- Committee for information technology services.

Meeting CMs' needs is evaluated after implementing new technologies, rules, procedures, products and services as part of the existing feedback procedure. Different user committees are established for each market operated by Moscow Exchange providing regular feedback.

Key consideration 2:

An FMI should have clearly defined goals and objectives that are measurable and achievable, such as in the areas of minimum service levels, risk-management expectations, and business priorities.

NCC's strategic goals and objectives are described in Principle 2. All goals are measurable and achievable.

NCC measures its performance against KPIs that are set annually and revised twice a year.

The Supervisory Board of NCC decides whether goals have been achieved or not. Based on the results of the previous Strategy the majority of NCC's goals were accomplished successfully.

Key consideration 3:

An FMI should have established mechanisms for the regular review of its efficiency and effectiveness.

NCC conducts assessment of efficiency

and progress in achieving the goals set for the running year on a yearly basis. Furthermore, there is an ongoing monitoring of the project implementation, and the progress reports are provided to the management at least once per quarter. NCC's statement of financial results is drawn up each quarter as well.

Final conclusion on the Principle 21

When determining the procedure for transactions and services, NCC takes into account the interests of CMs and the markets by forming user committees, with whom it discusses the changes prior to their introduction, and by means of the feedback arrangements, which make it possible to assess how satisfied CMs are.

To ensure an adequate level of NCC's performance efficiency, NCC sets strategic goals, monitors the progress in their achievement and conducts their regular revision.

PRINCIPLE 22: COMMUNICATION PROCEDURES AND STANDARDS

An FMI should use, or at a minimum accommodate, relevant internationally accepted communication procedures and standards in order to facilitate efficient payment, clearing, settlement, and recording.

Key consideration 1:

An FMI should use, or at a minimum accommodate, internationally accepted communication procedures and standards.

NCC conducts settlements and payments by means of the internationally accepted system, viz. SWIFT.

NCC uses the SWIFT standards in

communication.

As regards IT interaction NCC's systems use the SWIFT standards as well.

Final conclusion on the Principle 22

NCC uses internationally accepted communications standards to communicate with CMs, settlement organizations, and other counterparties.

PRINCIPLE 23: DISCLOSURE OF RULES, KEY PROCEDURES, AND MARKET DATA

An FMI should have clear and comprehensive rules and procedures and should provide sufficient information to enable participants to have an accurate understanding of the risks, fees, and other material costs they incur by participating in the FMI. All relevant rules and key procedures should be publicly disclosed.

Key consideration 1:

An FMI should adopt clear and comprehensive rules and procedures that are fully disclosed to participants. Relevant rules and key procedures should also be publicly disclosed.

Information is disclosed in the cases stipulated by the effective legislation and, additionally, to the extent contemplated by the Regulation on Information Policy of NCC.

The documents regulating the rules and procedures consist of Clearing Rules, clearing regulations, forms used in document exchange with CMs and approved by NCC's management bodies. These documents are made publicly available at NCC's website.

NCC Clearing Rules are published on its website. The relevant rules and

procedures are fully accessible to all CMs and any other interested parties, including the general public. NCC staff are available to answer questions from CMs on Clearing Rules and procedures.

NCC's rules and procedures contemplate events obstructing clearing services provision to CMs (i.e. emergencies) and the measures aimed to resolve such situations.

The information about the emergency and the measures taken to resolve the situation is provided to the exchange, CMs, settlement organizations and CBR in any possible way.

Clearing Rules are preliminarily reviewed and endorsed by the Risk Committee of the Supervisory Board. The establishment and modification of the size of the CCP liability and clearing rule changes relating to changes in the rules of the arbitration agreement shall become effective no earlier than three months after the disclosure.

Moreover, in due time before the modification or introduction of a new technological process, it is discussed at the specialized committees of Moscow Exchange.

NCC discloses its Clearing Rules and the documents developed in accordance with Clearing Rules at NCC's website. NCC holds meetings with CMs in order to clarify Clearing Rules.

Key consideration 2:

An FMI should disclose clear descriptions of the system's design and operations, as well as the FMI's and participants' rights and obligations, so that participants can assess the risks they would incur by participating in the FMI.

NCC's information is disclosed in the

cases stipulated by the effective legislation and, additionally, to the extent contemplated by the Regulation on Information Policy of NCC.

The recipients of such information are NCC's clients, CMs, NCC's shareholder, supervisory bodies and regulators, potential investors, members of NCC's Supervisory Board, professional securities market participants, mass media, etc.

The disclosure / provision requirements, in particular, apply to information about stress testing of the risk management system, documents regulating the operation of such system, and other relevant decisions of NCC's management bodies.

The procedure and actions taken by NCC in course of its clearing activities are described in Clearing Rules for the relevant market. Clearing Rules shall be registered by CBR and disclosed to all stakeholders at least 5 days prior to their effective date.

NCC's Clearing Rules and the Trading Rules of the Exchange stipulate possibilities for making key decisions affecting NCC's operations.

The list of rights and obligations of CMs and NCC is provided in Clearing Rules.

Along with Clearing Rules key risk management related documents are disclosed at the NCC web page. <http://www.nkcbank.ru/viewCatalog.do?menuKey=128>

Clearing Rules of the Bank National Clearing Centre (JCS):

- Part I. General part,
- Part II. Tariffs,
- Part III. Clearing Rules for Securities Market,

- Part IV. Clearing Rules for FX and Precious Market,
- Part V. Clearing Rules for Derivatives Market.
- Part VI. Clearing Rules for Commodities Market.
- Clearing Rules for Standardised OTC Derivatives Market.

<http://www.nkcbank.ru/viewCatalog.do?menuKey=277>

Key consideration 3:

An FMI should provide all necessary and appropriate documentation and training to facilitate participants' understanding of the FMI's rules and procedures and the risks they face from participating in the FMI.

When launching a new project, NCC sends information letters to CMs, uploads information (instructions) to its website, provides advice and explains the changes by phone and instructs on the actions CMs should take to continue proper operation.

In order for CMs to understand NCC's rules and procedures, NCC makes available at its website the information materials explaining NCC's rules and procedures and containing the contact information of the persons who could provide further explanations and answer questions.

If CM is required to take any actions, NCC checks and records the accuracy and timeliness of such actions on the part of all CMs.

If NCC identifies any CM whose conduct demonstrates absence of understanding of NCC's rules and procedures, NCC holds consultations with the CM and, as a result thereof, amends and supplements the

information materials made available at its website.

Key consideration 4:

An FMI should publicly disclose its fees at the level of individual services it offers as well as its policies on any available haircuts. The FMI should provide clear descriptions of priced services for comparability purposes.

The charges for the clearing services provided by NCC to CMs are determined by the document Clearing Rules Part II. Tariffs disclosed at [http://www.nkcbank.com/UserFiles/File/CK22/NCC%20Pravila%20kliringa.%20Tarifi%20\(1%20redakziya%202015\).pdf](http://www.nkcbank.com/UserFiles/File/CK22/NCC%20Pravila%20kliringa.%20Tarifi%20(1%20redakziya%202015).pdf)

The information about the new version of Clearing Rules containing the rates shall be disclosed pursuant to the provisions of the Russian legislation 5 days prior to the effective date of such new version.

The priced services are described in Clearing Rules in a manner enabling them to be compared with the services provided by the similar Financial Market Infrastructures.

Clearing Rules contain information about the technologies used during interaction between Financial Market Infrastructure's subjects: NCC, trade organizer, settlement organization, settlement depository, and CMs. Furthermore, NCC participates in the meetings of the IT committees held jointly with market participants.

Key consideration 5:

An FMI should complete regularly and disclose publicly responses to the CPSS-IOSCO disclosure framework for financial market infrastructures. An FMI also should, at a minimum, disclose basic data on trade volumes and values.

To the date, NCC completed 3 CPMI-IOSCO Disclosures framework for financial market infrastructures: in March and November, 2015, in June, 2016. NCC is aimed at disclosing the most relevant information about itself, thus the questionnaire is updated in case of any material changes and at least once in two years. Moreover, NCC discloses the quantitative information in compliance with CPMI-IOSCO Quantitative disclosure. The relevant documents are publicly available on the website: <http://nkcbank.ru/viewCatalog.do?menuKey=460>.

NCC and Moscow Exchange publicly disclose the quantitative information, including the following data:

- existing risk parameters used to determine the Initial margin requirements;
- trading results, including trading volumes, various prices (settlement prices, market prices, etc.), volume of positions opened for each futures contract / option contract;
- intraday trading dynamics.

In addition, NCC publicly discloses a significant volume of other information, including:

- Description of products/services provided;
- Description of the risk management framework;
- Requirements for CMs;
- Principal information about the policy of allocation of own funds and collateral of CMs.

The information is disclosed on the websites of NCC (www.nkcbank.ru) and Moscow Exchange (www.moex.com) in Russian and in English.

Final conclusion on the Principle 23

NCC discloses the documents determining the rules and procedures associated with clearing activities, approved by NCC's bodies. To ensure the clarity of wording and comprehensiveness of the contents, these documents undergo internal approval process and are coordinated with CMs (Risks Committee).

Clearing Rules disclose the rights and obligations of CMs, risk management measures taken by NCC, and NCC's rates. NCC and Moscow Exchange disclose the principal information about the volume and value of the trades executed via NCC as CCP.

NCC conducts regular assessments of compliance with CPMI-IOSCO PFMI and is aimed at disclosing information about itself as promptly as possible.

PRINCIPLE 24: DISCLOSURE OF MARKET DATA BY TRADE REPOSITORIES

Not applicable to NCC.
